

# **2025 Prior Authorization Criteria**

Last Modified: 01/15/2025

## 2025 Medicaid Preapproval Criteria

ABATACEPT .....	14
ACNE AGENTS .....	18
ACTIMMUNE .....	20
ADALIMUMAB .....	22
ADENOSINE DEAMINASE (ADA) REPLACEMENT .....	28
ADZYNMA .....	29
AFAMELANOTIDE .....	31
AFINITOR .....	32
ALEMTUZUMAB .....	33
ALGLUCOSIDASE ALFA .....	35
ALPHA-1 PROTEINASE INHIBITORS .....	36
AMIFAMPRIDINE .....	38
ANAKINRA .....	39
ANIFROLUMAB .....	41
ANTIEMETICS .....	42
ANTIHEMOPHILIC FACTORS .....	45
ANTITHROMBIN III .....	47
ANTITHYMOCYTE GLOBULINS .....	48
ANTI-TUBERCULOSIS AGENTS .....	50
APOMORPHINE .....	52
APREMILAST .....	53
ARIPIRAZOLE LONG ACTING INTRAMUSCULAR INJECTIONS .....	55
ARISTADA .....	56
ARIKAYCE .....	57
ASCIMINIB .....	58
ATIDARSAGENE AUTOTEMCEL .....	59

AVACOPAN.....	61
AVALGLUCOSIDASE ALFA-NGPT .....	63
AVATROMBOPAG.....	64
BARICITINIB.....	66
BELIMUMAB.....	67
BELZUTIFAN .....	69
BENRALIZUMAB .....	70
BEREMAGENE GEPERPAVEC-SVDT .....	72
BESREMI.....	73
BETAINE .....	74
BETIBEGLOGENE AUTOTEMCEL.....	75
BEVACIZUMAB .....	76
BEZLOTOXUMAB .....	77
BIRCH TRITERPENES .....	78
BONJESTA & DICLEGIS.....	79
BOTOX.....	80
BREXANOLONE.....	83
BUROSUMAB.....	85
CALCIFEDIOL .....	87
CALCITONIN GENE-RELATED PEPTIDE (CGRP) INHIBITORS .....	88
<b>CANNABIDIOL</b> .....	92
CANTHARIDIN .....	94
CAPLACIZUMAB-YHDP.....	96
<b>CAPSAICIN KIT</b> .....	97
CARGLUMIC ACID.....	98
CAYSTON.....	100
CENOBAMATE .....	101
CERLIPONASE ALFA .....	102
CERTOLIZUMAB.....	103

CFTR MODULATORS .....108

CHELATING AGENTS .....109

CHOLBAM .....112

CHOLESTATIC LIVER DISEASE .....114

CLADRIBINE .....116

COAGADEX .....118

COMPOUNDED MEDICATIONS .....119

CONTINUOUS GLUCOSE MONITORS (CGM) .....120

COPPER CHELATING AGENTS .....122

CORTICOTROPIN INJECTION GEL .....124

COVID-19 DIAGNOSTIC AT HOME TESTING (PHARMACY BENEFIT) .....126

CRIZANLIZUMAB .....127

CROVALIMAB .....128

CYSTEAMINE .....129

DALFAMPRIDINE .....130

DANICOPAN .....131

DAPTOMYCIN .....132

DASATINIB .....136

DEFIBROTIDE .....137

DELANDISTROGENE MOXEPARVOVEC-ROKL .....138

DIABETIC TEST STRIPS .....139

DINUTUXIMAB .....141

DOJOLVI .....142

DONANEMAB-AZBT .....143

DONISLECEL .....145

DORNASE ALFA .....146

DUOPA .....147

DUPILUMAB .....148

ECULIZUMAB .....152

EDARAVONE.....	156
EFLORNITHINE.....	157
ELAGOLIX .....	159
ELIVALDOGENE AUTOTEMCEL.....	160
ELTROMBOPAG    DERIVATIVES .....	161
EMICIZUMAB.....	164
EMAPALUMAB .....	166
ENDOTHELIN RECEPTOR ANTAGONISTS.....	168
ENTERAL NUTRITION/ORAL NUTRITION SUPPLEMENTS.....	169
ENZYME REPLACEMENT THERAPY (ERT) FOR GAUCHER DISEASE TYPE 1 .....	172
EPLONTERSEN, PATISIRAN, VUTRISIRAN .....	174
EPOPROSTENOL .....	175
ERGOT ALKALOIDS .....	177
ERYTHROPOIESIS STIMULATING AGENTS (ESAs) .....	178
ETANERCEPT .....	180
ETELCALCETIDE .....	184
ETRANACOGENE .....	185
EVKEEZA.....	186
EXAGAMGLOGENE AUTOTEMCEL .....	187
FABRY DISEASE AGENTS .....	189
FDA APPROVED DRUG – Below the Medicaid Line of Coverage .....	191
FDA APPROVED DRUG – Drug or Indication Not Yet Reviewed By Plan for Formulary Placement.....	192
FECAL MICROBIOTA .....	193
FENFLURAMINE.....	194
FIDANACOGENE .....	195
FIDAXOMICIN.....	196
FINERENONE .....	197
FLUCYTOSINE .....	198
FOSTAMATINIB .....	199

FLUOCINOLONE OCULAR IMPLANT .....	200
<b>FUMARATES FOR MULTIPLE SCLEROSIS</b> .....	<b>201</b>
FYARRO .....	203
GANAXOLONE .....	204
GIVOSIRAN .....	205
GLATIRAMER .....	206
GLUCAGON-LIKE PEPTIDE-1 AGONISTS (DIABETES) .....	208
GOLIMUMAB .....	209
GOSERELIN ACETATE IMPLANT .....	212
GROWTH HORMONES .....	214
GUSELKUMAB .....	217
HEPATITIS C DIRECT-ACTING ANTIVIRALS .....	218
HEREDITARY ANGIOEDEMA (HAE) .....	223
HEREDITARY TYROSINEMIA (HT-1) .....	227
HISTRELIN .....	228
Hormone supplementation under 18 years of age .....	229
HYALURONIC ACID DERIVATIVES .....	230
HYDROCORTISONE ORAL GRANULES .....	231
HYPOXIA-INDUCIBLE FACTOR PROLYL HYDROXYLASE (HIF PH) INHIBITORS .....	232
IBREXAFUNGERP .....	233
ICOSAPENT ETHYL .....	234
ILOPROST .....	235
ILARIS .....	236
IMMUNE GLOBULIN .....	239
INCLISIRAN .....	247
INEBILIZUMAB-CDON .....	249
INFLIXIMAB .....	251
INHALED MANNITOL .....	256
INTERFERONS FOR MULTIPLE SCLEROSIS .....	257

INTRAVITREAL ANTI-VEGF THERAPY.....	259
INTRAVITREAL COMPLEMENT INHIBITORS.....	262
INTRON-A.....	263
ISAVUCONAZONIUM SULFATE .....	264
ISOTRETINOIN ORAL.....	265
ITRACONAZOLE .....	267
KESIMPTA.....	268
LAROTRECTINIB.....	270
LAZERTINIB.....	271
LECANEMAB.....	272
LENACAPAVIR.....	274
LENIOLISIB.....	275
LETERMOVIR.....	276
LEUPROLIDE .....	277
LEVOKETOCONAZOLE.....	279
LIDOCAINE PATCH.....	280
LIFILEUCEL.....	281
LONAFARNIB.....	282
LONG-ACTING INJECTABLE RISPERIDONE.....	284
LOTILANER .....	285
LOVOTIBEGLOGENE AUTOTEMCEL.....	286
<b>LUSPATERCEPT-AAMT .....</b>	<b>288</b>
LUSUTROMBOPAG .....	290
MARIBAVIR .....	291
MARSTACIMAB .....	292
MAVACAMTEN.....	293
MAVORIXAFOR.....	294
MEBENDAZOLE .....	295
MECASERMIN.....	296

MEPOLIZUMAB .....	297
METRELEPTIN .....	301
MIACALCIN .....	302
MIGLUSTAT .....	304
MILTEFOSINE .....	306
MIRIKIZUMAB-MRKZ.....	307
MITAPIVAT .....	308
MOMETASONE SINUS IMPLANT.....	310
MOTIXAFORTIDE .....	311
MUCOPOLYSACCHARIDOSIS (MPS) AGENTS.....	312
MUSCULAR DYSTROPHY .....	314
MYELOID GROWTH FACTORS.....	316
NATALIZUMAB .....	321
NAXITAMAB .....	324
NEMOLIZUMAB-ILTO.....	326
NEONATAL FC RECEPTOR ANTAGONISTS .....	327
NILOTINIB.....	330
NIROGACESTAT .....	331
NON-PREFERRED MEDICAL DRUG CODES .....	332
NON-PREFERRED SODIUM-GLUCOSE CO-TRANSPORTERS (SGLT2) .....	333
NIEMANN-PICK DISEASE TYPE C (NPC) AGENTS .....	335
NULIBRY .....	336
NUSINERSEN .....	338
OCRELIZUMAB .....	340
OFEV .....	342
OLIPUDASE ALFA .....	344
OMALIZUMAB.....	346
OMAVELOXOLONE.....	349
OMIDUBICEL .....	350

ONASEMNOGENE ABEPARVOVEC XIOI.....	351
ONCOLOGY AGENTS.....	352
OPICAPONE.....	354
OPIOID NAÏVE 7 DAY LIMIT.....	355
OPIOID QUANTITY ABOVE 90 MORPHINE MILLIGRAM EQUIVALENTS (MME).....	356
OPZELURA.....	357
ORAL-INTRANASAL FENTANYL.....	359
ORENITRAM.....	361
ORGOVYX.....	363
ORITAVANCIN.....	364
OTESECONAZOLE.....	365
OSILODROSTAT.....	366
OXERVATE.....	367
OXYBATES.....	368
PALFORZIA.....	370
PALIPERIDONE PALMITATE INJECTABLES.....	372
PALIVIZUMAB.....	374
PALOVAROTENE.....	376
PALYNZIQ.....	377
PARATHYROID HORMONE.....	378
PARATHYROID HORMONE ANALOGS.....	379
PAROMOMYCIN.....	381
PCSK9 MONOCLONAL ANTIBODIES.....	382
PEDIATRIC WEIGHT LOSS.....	385
PEDMARK.....	386
PEGASYS.....	387
PEGLOTICASE.....	389
PEMIVIBART.....	390
PHENOXYBENZAMINE.....	392

PHESGO.....	393
PHOSPHODIESTERASE-5 (PDE-5) ENZYME INHIBITORS FOR PULMONARY ARTERIAL HYPERTENSION .....	394
PIRFENIDONE .....	395
POMBILITI AND OPFOLDA .....	396
POSACONAZOLE.....	398
POZELIMAB .....	399
PRAMLINTIDE.....	400
PRIMARY BILIARY CHOLANGITIS AGENTS .....	401
PROLIA .....	402
PROSTAGLANDIN INTRACAMERAL IMPLANTS.....	404
PROXIMAL COMPLEMENT INHIBITOR .....	405
<b>PYRIMETHAMINE</b> .....	407
RAVULIZUMAB-CWVZ .....	408
REMODULIN.....	411
RESLIZUMAB .....	413
RESMETIROM.....	414
RETHYMIC .....	416
RILONACEPT.....	417
RIOCIGUAT.....	419
RISANKIZUMAB .....	421
RISDIPLAM .....	424
RITUXIMAB.....	426
RNA INTERFERENCE DRUGS FOR PRIMARY HYPEROXALURIA 1 .....	431
ROMIPLOSTIM.....	432
ROMOSOZUMAB.....	434
RYPLAZIM.....	435
SACROSIDASE .....	436
SAPROPTERIN.....	437
SARILUMAB.....	438

SATRALIZUMAB-MWGE .....	440
SEBELIPASE ALFA .....	442
SECUKINUMAB .....	443
SELEXIPAG FOR INJECTION .....	448
SELF-ADMINISTERED DRUGS (SAD) .....	449
SELUMETINIB .....	450
SEROSTIM .....	452
SIGNIFOR .....	454
SIGNIFOR LAR .....	455
SILTUXIMAB .....	457
SIROLIMUS GEL .....	458
SODIUM PHENYLBUTYRATE .....	459
SOMATOSTATIN ANALOGS .....	460
SOTATERCEPT-CSRK .....	462
SPARSENTAN .....	464
SPESOLIMAB .....	465
SPHINGOSINE 1-PHOSPHATE (S1P) RECEPTOR MODULATORS .....	466
SPRAVATO .....	468
STIRIPENTOL .....	471
STRENSIQ .....	472
SUBCUTANEOUS IMMUNE GLOBULIN .....	474
SUTIMLIMAB .....	476
TAFAMIDIS .....	477
TAGRAXOFUSP-ERZS .....	478
TARPEYO .....	480
TEDIZOLID .....	481
TEDUGLUTIDE .....	483
TENOFOVIR ALAFENAMIDE .....	484
TEPROTUMUMAB-TRBW .....	485

TEPLIZUMAB-MZWV .....	486
TESTOSTERONE .....	488
TEZEPELUMAB-EKKO .....	490
THALIDOMIDE .....	491
THICK-IT .....	493
TILDRAKIZUMAB .....	494
TOBRAMYCIN INHALATION .....	495
TOCILIZUMAB.....	496
TOFACITINIB.....	499
TOFERSEN .....	503
TOLVAPTAN.....	504
TOPICAL AGENTS FOR CUTANEOUS T-CELL LYMPHOMA (including Mycosis fungoides and Sézary syndrome) .....	506
TOPICAL AGENTS FOR SEVERE INFLAMMATORY SKIN DISEASE .....	507
TRALOKINUMAB.....	509
TRASTUZUMAB .....	511
TRIPTORELIN .....	512
TROFINETIDE.....	514
TROGARZO .....	515
TRYVIO .....	516
TUCATINIB.....	517
TYVASO .....	518
UBLITUXIMAB-XIYY .....	520
USTEKINUMAB .....	522
VAGINAL PROGESTERONE.....	526
VALOCTOCOGENE ROXAPARVOVEC-RVOX.....	527
VARIZIG.....	528
VEDOLIZUMAB .....	529
VELMANASE ALFA-TYCV.....	531
VERTEPORFIN INJECTION .....	532

VIGABATRIN .....533

VIJOICE.....534

VISTOGARD .....536

VMAT2 INHIBITORS.....537

VOCLOSPORIN.....539

VORETIGENE NEPARVOVEC.....541

VORICONAZOLE.....542

VOSORITIDE .....544

VOXELOTOR .....545

WEGOVY .....546

XEOMIN, DYSPORT, MYOBLOC, and DAXXIFY .....547

XGEVA .....549

XIAFLEX .....550

XIFAXAN .....551

XURIDEN .....552

YONSA.....553

ZILUCOPLAN.....554

**POLICY NAME:**

**ABATACEPT**

**Affected Medications:** ORENCIA CLICKJET AUTO-INJECTOR, ORENCIA PREFILLED SYRINGE, ORENCIA INTRAVENOUS (IV) SOLUTION

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design <ul style="list-style-type: none"> <li>○ Rheumatoid Arthritis (RA)</li> <li>○ Polyarticular Juvenile Idiopathic Arthritis (JIA)</li> <li>○ Psoriatic Arthritis (PsA)</li> <li>○ Acute Graft Versus Host Disease (GVHD) Prophylaxis</li> </ul> </li> </ul>
<p><b>Required Medical Information:</b></p>	<p><b><u>Rheumatoid Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of current disease activity with one of the following (or equivalent objective scale): <ul style="list-style-type: none"> <li>○ Disease Activity Score derivative for 28 joints (DAS-28) greater than 3.2</li> <li>○ Clinical Disease Activity Index (CDAI) greater than 10</li> <li>○ Weighted Routine Assessment of Patient Index Data 3 (RAPID3) of at least 2.3</li> </ul> </li> </ul> <p><b><u>Psoriatic Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of Classification for Psoriatic Arthritis (CASPAR) criteria score of 3 or greater based on chart notes: <ul style="list-style-type: none"> <li>○ Skin psoriasis: present – two points, OR previously present by history – one point, OR a family history of psoriasis, if the patient is not affected – one point</li> <li>○ Nail lesions (onycholysis, pitting): one point</li> <li>○ Dactylitis (present or past, documented by a rheumatologist): one point</li> <li>○ Negative rheumatoid factor (RF): one point</li> <li>○ Juxta-articular bone formation on radiographs (distinct from osteophytes): one point</li> </ul> </li> </ul> <p><b><u>Psoriatic Arthritis in pediatrics 2 years and older</u></b></p> <ul style="list-style-type: none"> <li>• Diagnosis of PsA confirmed by presence of: <ul style="list-style-type: none"> <li>○ Arthritis and psoriasis OR</li> <li>○ Arthritis and at least 2 of the following: <ul style="list-style-type: none"> <li>▪ Dactylitis</li> <li>▪ Nail pitting or onycholysis</li> <li>▪ Psoriasis in a first-degree relative</li> </ul> </li> </ul> </li> </ul> <p><b><u>Juvenile Idiopathic Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of current level of disease activity with physician global assessment (MD global score) or active joint count</li> </ul>

- Nail lesions (onycholysis, pitting): one point
- Dactylitis (present or past, documented by a rheumatologist): one point
- Negative rheumatoid factor (RF): one point
- Juxtaarticular bone formation on radiographs (distinct from osteophytes): one point

**Ankylosing Spondylitis (AS), Non-radiographic Axial Spondyloarthritis (nr-axSpA)**

- Diagnosis of axial spondyloarthritis (SpA) confirmed by Sacroiliitis on imaging AND at least 1 Spondyloarthritis (SpA) feature:
  - Inflammatory back pain (4 of 5 features met):
    - Onset of back discomfort before the age of 40 years
    - Insidious onset
    - Improvement with exercise
    - No improvement with rest
    - Pain at night (with improvement upon arising)
  - Arthritis
  - Enthesitis
  - Uveitis
  - Dactylitis (inflammation of entire digit)
  - Psoriasis
  - Crohn’s disease/ulcerative colitis
  - Good response to NSAIDs
  - Family history of SpA
  - Elevated CRP
- OR**
- HLA-B27 genetic test positive AND at least TWO SpA features
- Documentation of active disease defined by Bath ankylosing spondylitis disease activity index (BASDAI) at least 4 or equivalent objective scale

**Ulcerative Colitis**

- Diagnosis supported by colonoscopy/endoscopy/sigmoidoscopy/biopsy

**Crohn’s disease**

- Documentation of moderate to severely active disease despite current treatment

**Juvenile Idiopathic Arthritis (JIA)**

- Documentation of current level of disease activity with physician global assessment (MD global score) or active joint count

**Uveitis**

- Documented diagnosis of noninfectious intermediate, posterior, or panuveitis uveitis

**Hidradenitis Suppurativa (HS)**

	<ul style="list-style-type: none"> <li>• Diagnosis of moderate to severe HS as defined by Hurley stage II or stage III disease</li> <li>• Documentation of baseline count of abscesses and inflammatory nodules</li> </ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b><u>Rheumatoid Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documented failure with at least 12 weeks of treatment with methotrexate             <ul style="list-style-type: none"> <li>○ If unable to tolerate methotrexate or contraindications apply, another disease modifying antirheumatic drug (sulfasalazine, hydroxychloroquine, leflunomide)</li> </ul> </li> <li>• Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of each therapy:             <ul style="list-style-type: none"> <li>○ One of following: Infliximab (preferred biosimilar products Inflectra, Avsola, Renflexis), Actemra IV</li> </ul> </li> <li>• <b>Maintenance:</b> 40 mg every other week</li> <li>• <b>Dose escalation:</b> 40 mg every week <b>OR</b> 80 mg every other week             <ul style="list-style-type: none"> <li>○ Approval will require documentation of lost or inadequate response after a minimum of 16 weeks with standard maintenance dosing</li> </ul> </li> </ul> <p><b><u>Plaque Psoriasis</u></b></p> <ul style="list-style-type: none"> <li>• Documented treatment failure with 12 weeks of at least TWO systemic therapies: Methotrexate, Cyclosporine, Acitretin, Phototherapy [UVB, PUVA]</li> <li>• Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of Infliximab (preferred biosimilar products: Inflectra, Avsola)</li> <li>• <b>Initial:</b> 80 mg as a single dose, followed by 40 mg every other week beginning 1 week after initial dose (160 mg total in first 28 days)</li> <li>• <b>Maintenance:</b> 40 mg every other week</li> <li>• <b>Dose escalation:</b> 40 mg every week <b>OR</b> 80 mg every other week             <ul style="list-style-type: none"> <li>○ Approval will require documentation of lost or inadequate response after a minimum of 16 weeks with standard maintenance dosing</li> </ul> </li> </ul> <p><b><u>Psoriatic Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documented failure with at least 12 weeks of treatment with methotrexate             <ul style="list-style-type: none"> <li>○ If unable to tolerate methotrexate or contraindications apply, another disease modifying antirheumatic drug (sulfasalazine, cyclosporine, leflunomide)</li> </ul> </li> <li>• Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of Infliximab (preferred biosimilar products: Inflectra, Avsola)</li> <li>• <b>Maintenance:</b> 40 mg every other week</li> </ul> <p><b><u>Ankylosing Spondylitis (AS), Non-radiographic Axial Spondyloarthritis (nr-axSpA)</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of <b>ONE</b> of the following:             <ul style="list-style-type: none"> <li>○ Documented failure with two daily prescription strength nonsteroidal anti-inflammatory drugs (ibuprofen, naproxen, diclofenac, meloxicam, etc.) with minimum 1 month trial each</li> </ul> </li> </ul>

- For peripheral arthritis: documented treatment failure with locally administered parenteral glucocorticoid
- Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of Infliximab (preferred biosimilar products: Inflectra, Avsola)
- **Maintenance:** 40 mg every other week

**Crohn’s Disease (CD)**

- Documentation of **ONE** of the following:
  - Documented treatment failure with at least two oral treatments for minimum of 12 weeks trial: corticosteroids, azathioprine, 6-mercaptopurine, methotrexate, sulfasalazine, balsalazide
  - OR**
  - Documentation of previous surgical intervention for Crohn’s disease
  - OR**
  - Documentation of severe, high-risk disease on colonoscopy defined by one of the following:
    - Fistulizing disease
    - Stricture
    - Presence of abscess/phlegmon
    - Deep ulcerations
    - Large burden of disease including ileal, ileocolonic, or proximal gastrointestinal involvement
- Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of Infliximab (preferred biosimilar products: Inflectra, Avsola)
- **Initial:** 160 mg on day 1, followed by 80 mg on day 15, then maintenance dosing beginning day 29
- **Maintenance:** 40 mg every other week
- **Dose escalation:** 40 mg every week **OR** 80 mg every other week
  - Approval will require documentation of lost or inadequate response after a minimum of 16 weeks with standard maintenance dosing (e.g., CDAI 220 or greater, CRP 10 mg/mL or greater, serum adalimumab concentrations less than 5 mcg/mL)

**Juvenile Idiopathic Arthritis (JIA)**

- Documented failure with at least 12 weeks of treatment with methotrexate or leflunomide
- Documented failure with glucocorticoid joint injections or oral corticosteroids
- **Maintenance:** 40 mg every other week

**Uveitis**

- Documented failure with at least 12 weeks of TWO of the following: an immunosuppressive agent such as: methotrexate, azathioprine, mycophenolate or a calcineurin inhibitor such as cyclosporine, tacrolimus

	<ul style="list-style-type: none"> <li>• Documented failure with (or documented intolerable adverse event) with 12 weeks of infliximab (preferred biosimilar products Inflectra, and Avsola)</li> <li>• <b>Initial:</b> 80 mg as a single dose, followed by 40 mg every other week beginning 1 week after initial dose (160 mg total in first 28 days)</li> <li>• <b>Maintenance:</b> 40 mg every other week</li> </ul> <p><b><u>Hidradenitis Suppurativa (HS)</u></b></p> <ul style="list-style-type: none"> <li>• Documented failure with at least 12 weeks trial of oral antibiotics for treatment of HS <ul style="list-style-type: none"> <li>○ Doxycycline, Tetracycline, Minocycline, or clindamycin plus rifampin</li> </ul> </li> <li>• Documented failure with 8 weeks on a systemic retinoid (e.g., isotretinoin or acitretin)</li> <li>• Documented failure with (or documented intolerable adverse event) with 12 weeks of infliximab (preferred biosimilar products Inflectra and Avsola)</li> <li>• <b>Initial:</b> 160 mg on day 1, followed by 80 mg on day 15, then maintenance dosing beginning day 29</li> <li>• <b>Maintenance:</b> 40 mg every week <b>OR</b> 80 mg every other week</li> </ul> <p><b><u>Ulcerative Colitis (UC)</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of <b>ONE</b> of the following: <ul style="list-style-type: none"> <li>○ Documented failure with at least two oral treatments for a minimum of 12 weeks: corticosteroids, sulfasalazine, mesalamine, balsalazide, cyclosporine, azathioprine, 6- mercaptopurine</li> <li>○ Documentation of severely active disease despite current treatment defined by greater than or equal to 6 bloody, loose stools per day with severe cramps and evidence of systemic toxicity (fever, tachycardia, anemia, and/or elevated CRP/ESR), or recent hospitalization for ulcerative colitis</li> </ul> </li> <li>• Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of Infliximab (preferred biosimilar products: Inflectra, Avsola)</li> <li>• <b>Initial:</b> 160 mg on day 1, followed by 80 mg on day 15, then maintenance dosing beginning day 29</li> <li>• <b>Maintenance:</b> 40 mg every other week</li> <li>• <b>Dose escalation:</b> 40 mg every week <b>OR</b> 80 mg every other week <ul style="list-style-type: none"> <li>○ Approval will require documentation of lost or inadequate response after a minimum of 16 weeks with standard maintenance dosing (eg, baseline low albumin, CRP 10 mg/mL or greater, serum adalimumab concentrations less than 5 mcg/mL)</li> </ul> </li> </ul> <p><b><u>Reauthorization</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of treatment success and clinically significant response to therapy</li> </ul>

CAYSTON

**Affected Medications:** CAYSTON (aztreonam inhalation)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA) approved indications not otherwise excluded by plan design.               <ul style="list-style-type: none"> <li>○ Cystic fibrosis</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Documentation of confirmed diagnosis of cystic fibrosis</li> <li>• Culture and sensitivity report confirming presence of Pseudomonas aeruginosa in the lungs</li> <li>• Baseline FEV1 greater than 25% but less than 75% predicted</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Documented failure, contraindication, or resistance to inhaled tobramycin</li> <li>• Dosing: 28 days on and 28 days off</li> </ul> <p><b>Reauthorization:</b> requires documentation of improved respiratory symptoms and need for long-term use</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Baseline FEV1 less than 25% or greater than 75% predicted</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• Age 7 years or older</li> </ul>
<b>Prescriber Restrictions:</b>	
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial approval: 1 month, unless otherwise specified</li> <li>• Reauthorization: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**

CENOBAMATE

**Affected Medications:** XCOPRI (cenobamate)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ Partial-onset seizures in adult patients</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Documentation of baseline seizure frequency</li> <li>• Documentation of treatment failure with at least three adjunctive therapies for seizure management (carbamazepine, lamotrigine, levetiracetam, oxcarbazepine, topiramate, lamotrigine, divalproex, lacosamide, zonisamide, phenytoin, valproic acid, gabapentin, pregabalin)</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<p>Dosing not to exceed 400 mg daily</p> <p><u>Reauthorization</u> will require documentation of treatment success and clinically significant response as determined by provider</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Familial short QT syndrome</li> </ul>
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a neurologist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Approval: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**  
CERLIPONASE ALFA

**Affected Medications:** BRINEURA (cerliponase alfa)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ To slow the loss of ambulation in pediatric patients with neuronal ceroid lipofuscinosis type 2 (CLN2), also known as tripeptidyl peptidase-1 (TPP1) deficiency</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Diagnosis of CLN2 disease confirmed by BOTH the following:               <ul style="list-style-type: none"> <li>○ Enzyme assay demonstrating deficient TPP1 activity</li> <li>○ Genetic testing that has detected two pathogenic variants/mutations in the TPP1/CLN2 gene (one on each parental allele of the TPP1/CLN2 gene)</li> </ul> </li> <li>• Documentation of mild to moderate functional impairment at baseline using the CLN2 Clinical Rating Scale, defined as ALL the following:               <ul style="list-style-type: none"> <li>○ Combined score of 3 to 6 in the motor and language domains</li> <li>○ Score of at least 1 in the motor domain</li> <li>○ Score of at least 1 in the language domain</li> </ul> </li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Dosing is in accordance with FDA labeling</li> </ul> <p><b>Reauthorization:</b></p> <ul style="list-style-type: none"> <li>• Documentation of clinical responsiveness to therapy defined as disease stabilization OR a score of at least 1 in the motor domain of the CLN2 Clinical Rating Scale</li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Any sign or symptom of acute or unresolved localized infection on or around the device insertion site (e.g., cellulitis or abscess); or suspected or confirmed CNS infection (e.g., cloudy CSF or positive CSF gram stain, or meningitis)</li> <li>• Any acute intraventricular access device-related complication (e.g., leakage, extravasation of fluid, or device failure)</li> <li>• Other forms of neuronal ceroid lipofuscinosis</li> <li>• Patients with ventriculoperitoneal shunts</li> </ul>
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a neurologist with expertise in the diagnosis of CLN2</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Authorization: 6 months, unless otherwise specified</li> </ul>

**POLICY NAME:**  
**CERTOLIZUMAB**

**Affected Medications:** CIMZIA KIT, CIMZIA PREFILLED SYRINGE KIT, CIMZIA PREFILLED SYRINGE STARTER KIT

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design             <ul style="list-style-type: none"> <li>○ Plaque Psoriasis (PP)</li> <li>○ Rheumatoid Arthritis (RA)</li> <li>○ Psoriatic Arthritis (PsA)</li> <li>○ Ankylosing Spondylitis (AS)</li> <li>○ Non-radiographic Axial Spondyloarthritis (NR-axSPA)</li> <li>○ Crohn’s Disease (CD)</li> <li>○ Polyarticular Juvenile Idiopathic Arthritis (pJIA)</li> </ul> </li> </ul>

	<p><b><u>Ankylosing Spondylitis, Non-radiographic Axial Spondyloarthritis, and Psoriatic Arthritis with Axial Involvement</u></b></p> <ul style="list-style-type: none"> <li>• Diagnosis of axial spondyloarthritis (SpA) confirmed by sacroiliitis on imaging AND at least one spondyloarthritis feature: <ul style="list-style-type: none"> <li>○ Inflammatory back pain (4 of 5 features met): <ul style="list-style-type: none"> <li>▪ Onset of back discomfort before the age of 40 years</li> <li>▪ Insidious onset</li> <li>▪ Improvement with exercise</li> <li>▪ No improvement with rest</li> <li>▪ Pain at night (with improvement upon arising)</li> </ul> </li> <li>○ Arthritis</li> <li>○ Enthesitis</li> <li>○ Uveitis</li> <li>○ Dactylitis (inflammation of entire digit)</li> <li>○ Psoriasis</li> <li>○ Crohn’s disease/ulcerative colitis</li> <li>○ Good response to nonsteroidal anti-inflammatory drugs (NSAIDs)</li> <li>○ Family history of SpA</li> <li>○ Elevated C-reactive protein (CRP)</li> </ul> </li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>○ HLA-B27 genetic test positive AND at least TWO SpA features</li> </ul> <li>• Documentation of active disease defined by Bath ankylosing spondylitis disease activity index (BASDAI) at least 4 or equivalent objective scale</li> <p><b><u>Crohn’s disease</u></b></p> <ul style="list-style-type: none"> <li>• Diagnosis supported by colonoscopy/endoscopy/sigmoidoscopy/biopsy</li> <li>• Documentation of moderate to severely active disease despite current treatment</li> </ul> <p><b><u>Polyarticular Juvenile Idiopathic Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documented current level of disease activity with physician global assessment (MD global score) or active joint count</li> </ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b><u>All indications</u></b></p> <ul style="list-style-type: none"> <li>• Exception for pregnancy requires documentation of actively attempting to conceive</li> </ul> <p><b><u>Rheumatoid Arthritis</u></b></p> <ul style="list-style-type: none"> <li>• Documented failure with at least 12 weeks of treatment with methotrexate <ul style="list-style-type: none"> <li>○ If unable to tolerate methotrexate or contraindications apply, another disease modifying antirheumatic drug (sulfasalazine, hydroxychloroquine, leflunomide)</li> </ul> </li> <li>• Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of each therapy: <ul style="list-style-type: none"> <li>○ One of following: Infliximab (preferred biosimilar products Inflectra, Avsola, Renflexis), Actemra IV</li> </ul> </li> </ul> <p><b>AND</b></p>

- Two of the following: Olumiant, Kevzara, Simponi Aria, Actemra SQ, Kineret, rituximab (preferred biosimilar products Truxima, Riabni, and Ruxience), Adalimumab (preferred biosimilars: Adalimumab-fkjp, Hadlima, Adalimumab-adaz)

**Plaque Psoriasis**

- Documented treatment failure with 12 weeks of at least TWO systemic therapies: methotrexate, cyclosporine, acitretin, phototherapy [UVB, PUVA]
- Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of each therapy:
  - Infliximab (preferred biosimilar products Inflectra, Avsola)

**AND**

  - One of the following: Otezla, Adalimumab (preferred biosimilars: Adalimumab-fkjp, Hadlima, Adalimumab-adaz), or Ilumya

**Psoriatic Arthritis**

- Documented treatment failure with at least 12 weeks of treatment with methotrexate
  - If unable to tolerate methotrexate or contraindications apply, another disease modifying antirheumatic drug (sulfasalazine, cyclosporine, leflunomide)
- Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of each therapy:
  - Infliximab (preferred biosimilar products Inflectra, Avsola)

**AND**

  - One of the following: Otezla, Simponi Aria, Orencia, or Adalimumab (preferred biosimilars: Adalimumab-fkjp, Hadlima, Adalimumab-adaz)

**Ankylosing Spondylitis, Non-radiographic Axial Spondyloarthritis, and Psoriatic Arthritis with Axial Involvement**

- Documented treatment failure with two daily prescription strength nonsteroidal anti-inflammatory drugs (ibuprofen, naproxen, diclofenac, meloxicam, etc.) with minimum 1 month trial each
- OR**
- For peripheral arthritis: documented treatment failure with locally administered parenteral glucocorticoid
  - Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of:
    - Infliximab (preferred biosimilar products Inflectra, Avsola)

**AND**

    - One of the following: Simponi Aria or Adalimumab (preferred biosimilars: Adalimumab-fkjp, Hadlima, Adalimumab-adaz)

**Crohn's Disease**

- Documented treatment failure with at least two oral treatments for minimum of 12 weeks trial: corticosteroids, azathioprine, 6-mercaptopurine, methotrexate, sulfasalazine, balsalazide
- OR**
- Documentation of previous surgical intervention for Crohn's disease
- OR**
- Documentation of severe, high-risk disease on colonoscopy defined by one of the following:
  - Fistulizing disease
  - Stricture
  - Presence of abscess/phlegmon
  - Deep ulcerations
  - Large burden of disease including ileal, ileocolonic, or proximal gastrointestinal involvement
- Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of:
  - Infliximab (preferred biosimilar products Inflectra, Avsola)
- AND**
- One of the following: Entyvio or Adalimumab (preferred biosimilars: Adalimumab-fkjp, Hadlima, Adalimumab-adaz)

**Polyarticular Juvenile Idiopathic Arthritis**

- Documented failure with at least 12 weeks of treatment with methotrexate or leflunomide
- AND**
- Documented failure with glucocorticoid joint injections or oral corticosteroids
- Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of two of the following therapies:
  - Actemra IV, Adalimumab (preferred biosimilars: Adalimumab-fkjp, Hadlima, Adalimumab-adaz), and Simponi Aria

**QL**

- Induction
  - CD/RA/PsA/AS/PP: 400 mg (2 injections) at week 0, 2 and 4
  - pJIA:
    - 10 to <20 kg: 100 mg week 0, 2, 4
    - 20 to <40 kg: 200 mg week 0, 2, 4
    - ≥40 kg: 400 (2 injections) week 0, 2, 4
- Maintenance
  - CD/RA/PsA/AS: 400 mg (2 injections) per 28 days
  - PP:
    - 90 kg or less: 400 mg (2 injections) per 28 days
    - >90 kg: 400 mg every other week

	<ul style="list-style-type: none"> <li>○ pJIA:           <ul style="list-style-type: none"> <li>▪ 10 to &lt;20 kg: 50 mg every 2 weeks</li> <li>▪ 20 to &lt;40 kg: 100 mg every 2 weeks</li> <li>▪ ≥40 kg: 200 mg every 2 weeks</li> </ul> </li> </ul> <p><b><u>Reauthorization</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of treatment success and a clinically significant response to therapy</li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Concurrent use with any other targeted immune modulator is considered experimental and is not a covered benefit</li> </ul>
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a rheumatologist/dermatologist/gastroenterologist as appropriate for diagnosis</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial Authorization: 6 months, unless otherwise specified</li> <li>• Reauthorization: 24 months, unless otherwise specified</li> </ul>

POLICY NAME:

**CFTR MODULATORS**

Affected Medications: ORKAMBI (lumacaftor/ivacaftor), KALYDECO (ivacaftor), TRIKAFTA (elexacaftor, tezacaftor and ivacaftor; ivacaftor), SYMDEKO (tezacaftor/ivacaftor tablets)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ Cystic fibrosis in patients with mutation(s) in the F508del cystic fibrosis transmembrane conductance regulator (CFTR) gene</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Documentation of cystic fibrosis (CF) diagnosis confirmed by appropriate genetic or diagnostic testing (FDA approved CF mutation test)               <ul style="list-style-type: none"> <li>○ Please provide the diagnostic testing report and/or Cystic Fibrosis Foundation Patient Registry Report</li> </ul> </li> <li>• Documentation of mutation(s) in the CFTR gene for which the drug has been FDA-approved to treat</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<p><u>Reauthorization</u> will require documentation of treatment success</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• <u>Kalydeco</u>: Homozygous F508del mutation</li> <li>• Concurrent use with another CFTR modulator</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• <u>Kalydeco</u>: one month or older</li> <li>• <u>Orkambi</u>: 1 year of age and older</li> <li>• <u>Trikafta</u>: 2 years of age and older</li> <li>• <u>Symdeko</u>: 6 years of age and older</li> </ul>
<b>Prescriber/Site of Care Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a pulmonologist or provider who specializes in CF</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial Authorization: 12 months, unless otherwise specified</li> <li>• Reauthorization: 24 months unless otherwise specified</li> </ul>

**POLICY NAME:**  
**CHELATING AGENTS**

<b>PA policy applicable to: deferasirox, deferiprone</b>		
1. Is the request for continuation of therapy currently approved through insurance?	Yes – Go to renewal criteria	No – Go to #2
2. Is the request to treat a diagnosis according to one of the Food and Drug Administration (FDA)-approved indications?	Yes – Go to appropriate section below	No – Criteria not met
<b>Chronic Iron Overload Due to Blood Transfusions in Myelodysplastic Syndromes</b>		
1. Documentation of International Prognostic Scoring System (IPSS) low or intermediate-1 risk level?	Yes – Document and go to #2	No – Criteria not met
2. Documentation of a history of more than 20 red blood cell (RBC) transfusions OR that it is anticipated that more than 20 would be required?	Yes – Document and go to #3	No – Criteria not met
3. Documentation of serum ferritin levels greater than 2500 ng/ml?	Yes – Document and go to # 4	No – Criteria not met
4. Is the request for deferasirox soluble tablet?	Yes – Go to #6	No- Go to #5
5. Is there documented failure with deferasirox?	Yes – Document and go to #6	No – Criteria not met
6. Is the drug prescribed by, or in consultation with, a hematologist specialist?	Yes – Go to #7	No – Criteria not met
7. Is the requested dose within the Food and Drug Administration (FDA) approved label?	Yes – Approve up to 12 months	No – Criteria not met
<b>Chronic Iron Overload Due to Blood Transfusions in Thalassemia syndromes, Sickle Cell Disease, or other anemias</b>		
1. Documentation of pretreatment serum ferritin level within the last 60 days of at least 1000 mcg/L?	Yes – Document and go to #2	No – Criteria not met

2. Is the request for deferasirox soluble tablet?	Yes – Document and go to #4	No – Go to #3
3. Is there documented failure with deferasirox?	Yes – Document and go to #4	No – Criteria not met
4. Documentation of platelet counts greater than 50,000 per microliter?	Yes – Go to #5	No – Criteria not met
5. Is the drug prescribed by, or in consultation with, a hematologist specialist?	Yes – Document and go to #6	No – Criteria not met
6. Is the requested dose within the Food and Drug Administration (FDA) approved label?	Yes – Approve up to 12 months	No – Criteria not met
<b>Chronic Iron Overload in Non-Transfusion Dependent Thalassemia Syndromes</b>		
1. Documentation of liver iron (Fe) concentration (LIC) levels consistently greater than or equal to 5 mg Fe per gram of dry weight	Yes – Document and go to #2	No – Criteria not met
2. Documentation of serum ferritin levels consistently greater than 300 mcg/L prior to initiation of treatment	Yes – Document and go to #3	No – Criteria not met
3. Is the requested dose within the Food and Drug Administration (FDA) approved label?	Yes – Approve up to 12 months	No – Criteria not met
<b>Renewal Criteria</b>		
1. Is there documentation of treatment success and a clinically significant response to therapy defined as a reduction from baseline liver iron concentration (LIC) or serum ferritin level? (LIC and serum ferritin must still be above 3 mg Fe per gram of dry weight and 500 mcg/L, respectively)	Yes – Go to #2	No – Criteria not met
2. Is the requested dose within the Food and Drug Administration (FDA)-approved label and PacificSource quantity limitations?	Yes – Approve up to 12 months	No – Criteria not met
<b>Quantity Limitations</b>		

- **Exjade (deferasirox soluble tablet) – available in 125mg, 250mg, 500mg tablets**
  - 20-40 mg/kg/day
- **Jadenu (deferasirox tablet or granules) – available in 90mg, 180mg, 360mg tablets**
  - 14-28 mg/kg/day
- **Ferriprox (deferiprone) – 100mg/ml oral solution, 500mg, 1000mg tablets**
  - 75-99 mg/kg/day
  - Can be used in adult and pediatric patients 8 years of age and older (tablets), or 3 years of age and older (solution)

**POLICY NAME:**

**CHOLBAM**

**Affected Medications:** CHOLBAM (cholic acid)

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design <ul style="list-style-type: none"> <li>○ Treatment of bile acid synthesis disorders due to single enzyme defects (SEDs)</li> <li>○ Adjunctive treatment of peroxisomal disorders, including Zellweger spectrum disorders, in patients who exhibit manifestations of liver disease, steatorrhea, or complications from decreased fat-soluble vitamin absorption</li> </ul> </li> </ul>

**Appropriate Treatment Regimen & Other Criteria:**

- Empiric outpatient intravenous treatment of a suspected gram-positive bacterial infection for up to 7 days

**Bacteremia, including right-sided infective endocarditis**

- Documentation of MRSA or VRE infection
- Documentation of treatment failure or pathogen resistance to linezolid and vancomycin or contraindication or rationale for avoidance to therapy with each
- Adult dosing:
  - 6 to 12 mg/kg once daily
  - CrCl less than 30 mL/min: adjust dose frequency to once every 48 hours
- Pediatric dosing:
  - 1 to 6 years of age: 12mg/kg once daily
  - 7 to 11 years of age: 9mg/kg once daily
  - 12 to 17 years of age: 7mg/kg once daily
- Duration of therapy: 2 to 6 weeks

**Bacteremia associated with intravascular line**

- Documentation of treatment failure or pathogen resistance to linezolid and vancomycin or contraindication or rationale for avoidance to therapy with each.
- Adult dosing
  - For infections caused by MRSA: 6 to 8mg/kg once daily
  - For infections caused by
    - methicillin-resistant, coagulase-negative staphylococci: 6mg/kg once daily
    - ampicillin-resistant, vancomycin-susceptible *Enterococcus faecalis/faecium*: 6mg/kg once daily
    - ampicillin-resistant, vancomycin-resistant *Enterococcus faecalis/faecium*: 6mg/kg once daily
  - CrCl less than 30 mL/min: adjust dose frequency to once every 48 hours

**cSSSI**

- Documentation of MSSA or MRSA infection
- Documentation of treatment failure or pathogen resistance to beta-lactams (e.g., cefazolin), clindamycin, doxycycline, linezolid, sulfamethoxazole/trimethoprim, and vancomycin, or contraindication or rationale for avoidance to therapy with each
- Adult dosing:
  - 4mg/kg once daily for 7 to 14 days

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design</li> <li>• Pediatric indications:             <ul style="list-style-type: none"> <li>○ Growth Hormone Deficiency</li> <li>○ Pituitary dwarfism (short stature disorder due to growth hormone deficiency)                 <ul style="list-style-type: none"> <li>▪ Growth hormone deficiency without short stature NOT a funded indication</li> </ul> </li> <li>○ Turner’s syndrome</li> <li>○ Prader-Willi syndrome</li> <li>○ Noonan’s syndrome</li> <li>○ Short stature homeobox-containing gene (SHOX) deficiency</li> <li>○ Growth failure secondary to chronic kidney disease (stages 3, 4, 5 or ESRD) or renal transplant</li> <li>○ Small for gestational age</li> </ul> </li> <li>• Adult indications:             <ul style="list-style-type: none"> <li>○ Growth Hormone Deficiency</li> </ul> </li> </ul>
<p><b>Required Medical Information:</b></p>	<p><u>All indications:</u></p> <ul style="list-style-type: none"> <li>• Documentation of baseline height, height velocity, and bone age (pediatrics), and patient weight</li> </ul> <p><u>Pediatric growth hormone deficiency or Pituitary dwarfism</u></p> <ul style="list-style-type: none"> <li>• For initial approval, documentation of the following is required:             <ul style="list-style-type: none"> <li>○ Diagnosis of growth hormone deficiency or pituitary dwarfism AND</li> <li>○ Low serum values for GH stimulation test, IGF-1, and IGFBP-3 with delayed bone age AND                 <ul style="list-style-type: none"> <li>▪ Height standard deviation score (SDS) of -2.5 (0.6<sup>th</sup> percentile)</li> <li>OR</li> <li>▪ Height velocity impaired AND</li> <li>▪ Height SDS of -2 (2.3<sup>rd</sup> percentile) for bone age</li> </ul> </li> </ul> </li> </ul> <p><u>Turner’s syndrome</u></p> <ul style="list-style-type: none"> <li>• For initial approval, documentation of the following is required:             <ul style="list-style-type: none"> <li>○ Diagnosis of Turner Syndrome done through genetic testing AND                 <ul style="list-style-type: none"> <li>▪ For patients less than 2 years of age:                     <ul style="list-style-type: none"> <li>• Documented 50% delay in growth from projected based on WHO growth curves at equivalent age, AND</li> <li>• No secondary factor present that would explain observed growth delays</li> </ul> </li> <li>▪ For patients greater than or equal to 2 years of age:</li> </ul> </li> </ul> </li> </ul>

- Height below the 5th percentile for bone age, AND
- No secondary factor present that would explain observed growth delays

Noonan’s syndrome

- For initial approval, documentation of the following is required:
  - Diagnosis of Noonan’s syndrome done through genetic testing AND
    - Height standard deviation score (SDS) of -2.5 (0.6<sup>th</sup> percentile)
    - OR
    - Height velocity impaired AND
    - Height SDS of -2 (2.3rd percentile) for bone age

Short stature homeobox-containing gene (SHOX) deficiency

- For initial approval, documentation of the following is required:
  - Diagnosis of SHOX deficiency done through genetic testing
    - Height standard deviation score (SDS) of -2.5 (0.6<sup>th</sup> percentile)
    - OR
    - Height velocity impaired AND
    - Height SDS of -2 (2.3rd percentile) for bone age

Growth failure secondary to chronic kidney disease stage 3 and greater OR kidney transplant

- For initial approval, documentation of the following is required:
  - Diagnosis of chronic kidney disease stage 3 or higher (CrCl less than 60mL/min)
  - Height velocity (SDS) less than -1.88 for bone age.

Prader-Willi syndrome

- For initial approval, documentation of the following is required:
  - Diagnosis of Prader-Willi syndrome through genetic testing AND
  - Height velocity impaired

Small for gestational age

- For initial approval, documentation of the following is required:
  - Documentation of weight and/or length of at least 2 standard deviations (SD) from the mean for gestational age and sex at birth
  - At least two years old
  - Height standard deviation score of at least -2.5 at the start of therapy
  - Documentation of lab work ruling out other physiological and genetic conditions that cause short stature including:
    - IGF-1 and IGFBP-3 values within normal range
    - Evaluation for growth inhibiting medications
    - Absence of chronic illness impacting growth velocity
    - Absence of genetic condition impacting growth velocity

	<p><u>Adult Growth Hormone</u></p> <ul style="list-style-type: none"> <li>• For initial approval, documentation of the following is required: <ul style="list-style-type: none"> <li>○ Growth hormone deficiency defined as IGF-1 outside of reference range for patients' sex and age</li> <li>○ Failure of a growth hormone stimulation test (insulin tolerance test ITT or glucagon stimulation test)</li> </ul> </li> </ul> <p><u>Reauthorization:</u></p> <ul style="list-style-type: none"> <li>• Pediatric: requires a documented growth rate increase of at least 2.5 cm over baseline per year AND evaluation of epiphyses (growth plates) documenting they remain open</li> <li>• Adult: requires documented clinical improvement and IGF-1 within normal reference range for age and sex</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Documentation of clinical failure with an adequate trial (at least 12 weeks) of Norditropin prior to any other growth hormone agent</li> </ul> <p><u>Skytrofa and Ngenla</u></p> <ul style="list-style-type: none"> <li>• Documentation of clinical failure with an adequate trial (at least 12 weeks each) of all formulary growth hormone options</li> </ul> <p><u>Sogroya</u></p> <ul style="list-style-type: none"> <li>• Documented clinical failure with an adequate trial (at least 12 weeks each) of Norditropin AND one additional daily growth hormone agent</li> <li>• Dose-rounding to the nearest vial size within 10% of the prescribed dose will be enforced</li> </ul>
<b>Exclusion Criteria:</b>	
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, an age-appropriate endocrinologist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Approval: 12 months, unless otherwise specified</li> </ul>

POLICY NAME:

**POLICY NAME:**

**HEPATITIS C DIRECT-ACTING ANTIVIRALS**

**Affected Medications:** EPCLUSA (Sofosbuvir/Velpatasvir), VOSEVI (Sofosbuvir/Velpatasvir/Voxilaprevir), MAVYRET (Glecaprevir/Pibrentasvir)

Approval Criteria		
1. What diagnosis is being treated?	Record ICD10 code.	
2. Is the request for treatment of Hepatitis C infection?	<b>Yes:</b> Go to #3 Document baseline quantitative HCV RNA level	<b>No:</b> Pass to RPh. Deny; medical appropriateness.
<ul style="list-style-type: none"> <li>• Has <u>all</u> the following pre-treatment testing been documented:               <ul style="list-style-type: none"> <li>○ Genotype testing in past 3 years is required if the patient has decompensated cirrhosis, <u>prior treatment experience</u> with a DAA regimen, and if prescribed a regimen which is not pan-genotypic</li> <li>○ History of previous HCV treatment, viral load after treatment, and outcome are required only if there is documentation of treatment experience</li> </ul> </li> </ul>	<b>Yes:</b> Record results of each test and go to #4	<b>No:</b> Pass to RPh. Request updated testing.
4. Which regimen is requested?	Document and go to #5	
5. Has the patient been treated with a direct acting antiviral regimen previously?	<b>Yes:</b> Go to #6	<b>No:</b> Go to #8

Approval Criteria		
6. Did the patient achieve a sustained virological response (SVR) at week 12 or longer following the completion of their last DAA regimen?	<b>Yes:</b> Go to #7	<b>No:</b> Document as treatment failure and treat as indicated for treatment experienced. Go to #8
<ul style="list-style-type: none"> <li>• Is this likely a reinfection, indicated by at least one of the following:               <ul style="list-style-type: none"> <li>○ Does the patient have ongoing risk factors for hepatitis C reinfection (e.g., sexually active men who have sex with men, persons who inject drugs), OR</li> <li>○ Is the hepatitis C infection a different genotype than previous</li> </ul> </li> </ul>	<b>Yes:</b> Document as reinfection. Use regimens recommended for treatment naïve patients. Go to #8	<b>No:</b> Document as treatment failure and treat as indicated for treatment experienced. Go to #8
<ul style="list-style-type: none"> <li>• Is the prescribed drug:               <ul style="list-style-type: none"> <li>○ Elbasvir/grazoprevir for GT 1a infection; <u>or</u></li> <li>○ Ledipasvir/sofosbuvir for GT 1a <u>treatment-experienced</u> infection; <u>or</u></li> <li>○ Sofosbuvir/velpatasvir for GT 3 in <u>cirrhosis</u> or <u>treatment-experienced</u> infection</li> </ul> </li> </ul>	<b>Yes:</b> Go to #9	<b>No:</b> Go to #10
9. Has the patient had a baseline NS5a resistance test that documents a resistant variant to one of the agents in #8?  Note: Baseline NS5A resistance testing is required.	<b>Yes:</b> Pass to RPh; deny for appropriateness	<b>No:</b> Go to #10  Document test and result.

<p>10. Is the prescribed drug regimen a recommended regimen based on the patient’s genotype, age, treatment status (retreatment or treatment naïve) and cirrhosis status (see <b>Table 1 and Table 2</b>)?</p> <p>Note: Safety and efficacy of DAAs for children &lt; 3 years of age have not been established Pediatric dosing available in <b>Table 3 and Table 4</b></p>	<p><b>Yes:</b> Approve for 8-24 weeks based on duration of treatment indicated for approved regimen</p> <p>Referral will be made for optional case management (patient may choose to opt-in).</p>	<p><b>No:</b> Pass to RPh. Deny; medical appropriateness.</p>
---	---	---

**Table 1: Recommended Treatment Regimens for Adults, and Adolescents 12 years of age and older with Hepatitis C virus.**

Treatment History	Cirrhosis Status	Recommended Regimen
<b>Treatment Naïve (Genotype 1-6)</b>		
Treatment naïve, confirmed reinfection or prior treatment with PEGylated interferon/ribavirin	Non-cirrhotic or compensated cirrhosis	SOF/VEL x 12 weeks G/P x 8 weeks
	Compensated cirrhosis	G/P x 8 weeks SOF/VEL x 12 weeks (baseline resistance testing recommended for GT3)
	Decompensated Cirrhosis	SOF/VEL + RBV x 12 weeks SOF/VEL x 24 weeks (if ribavirin ineligible*)
<b>Treatment Experienced (Genotype 1-6)</b>		
Sofosbuvir based regimen treatment failures, including: Sofosbuvir + ribavirin Ledipasvir/sofosbuvir Velpatasvir/sofosbuvir	Non-cirrhotic or compensated cirrhosis	SOF/VEL/VOX x12 weeks G/P x 16 weeks (except GT3)
Elbasvir/grazoprevir treatment failures	Non-cirrhotic or compensated cirrhosis	SOF/VEL/VOX x 12 weeks

Glecaprevir/pibrentasvir treatment failures	Non-cirrhotic or compensated cirrhosis	G/P + SOF + RBV x 16 weeks SOF/VEL/VOX x 12 weeks (plus RBV if compensated cirrhosis)
<u>Multiple DAA Treatment Failures, including:</u> sofosbuvir/velpatasvir/voxilaprevir glecaprevir/pibrentasvir + sofosbuvir	Non-cirrhotic or compensated cirrhosis	G/P + SOF + RBV x 16-24 weeks SOF/VEL/VOX x 24 weeks
Abbreviations: DAA = direct acting antiviral; EBV/GZR = elbasvir/grazoprevir; G/P = glecaprevir and pibrentasvir; PEG = pegylated interferon; RAV = resistance-associated variant; RBV = ribavirin; SOF = sofosbuvir; SOF/VEL = sofosbuvir/velpatasvir; SOF/VEL/VOX = sofosbuvir/velpatasvir/voxilaprevir		
* Ribavirin ineligible/intolerance may include: 1) neutrophils < 750 mm <sup>3</sup> , 2) hemoglobin < 10 g/dl, 3) platelets <50,000 cells/mm <sup>3</sup> , autoimmune hepatitis or other autoimmune condition, hypersensitivity or allergy to ribavirin		
^ Rarely, genotyping assays may indicate the presence of a mixed infection (e.g., genotypes 1a and 2). Treatment data for mixed genotypes with direct-acting antivirals are limited. However, in these cases, a pangenotypic regimen is appropriate.		
Ribavirin-containing regimens are absolutely contraindicated in pregnant women and in the male partners of women who are pregnant. Documented use of two forms of birth control in patients and sex partners for whom a ribavirin containing regimen is chosen is required.		
All regimens containing a protease inhibitor (elbasvir, glecaprevir, simeprevir, paritaprevir, voxilaprevir) should not be used in patients with moderate to severe hepatic impairment (CTP B and C).		
There is limited data supporting DAA regimens in treatment- experienced patients with decompensated cirrhosis. These patients should be handled on a case by case basis with the patient, prescriber, and CCO or FFS medical director.		
Definitions of Treatment Candidates • Treatment-naïve: Patients without prior HCV treatment. • Treat as treatment-naïve: Patients who discontinued HCV DAA therapy within 4 weeks of initiation or have confirmed reinfection after achieving SVR following HCV treatment. • Treatment-experienced: Patients who received more than 4 weeks of HCV DAA therapy.		

**Table 2: Recommended Treatment Regimens for children ages 3 - 12 years of age with Hepatitis C virus.**

Treatment History	Cirrhosis Status	Recommended Regimen
<b>Treatment Naïve Genotype 1-6</b>		
Treatment naïve, confirmed reinfection or prior treatment with pegylated interferon/ribavirin	Non-cirrhotic or compensated cirrhosis	SOF/VEL x 12 weeks G/P x 8 weeks
	Decompensated Cirrhosis	SOF/VEL + RBV x 12 weeks
<b>Treatment Experienced with DAA regimen</b>		

Note: Efficacy and safety extremely limited in treatment experienced to other DAAs in this population. Can consider recommended treatment regimens in adults if FDA approved for pediatric use. Recommend consulting with hepatologist.

Abbreviations: DAA = direct acting antiviral; G/P = glecaprevir and pibrentasvir; RBV = ribavirin; SOF = sofosbuvir; SOF/VEL = sofosbuvir/velpatasvir

- All regimens containing a protease inhibitor (elbasvir, glecaprevir, simeprevir, paritaprevir, voxilaprevir) should not be used in patients with moderate to severe hepatic impairment (CTP B and C).
- There is limited data supporting DAA regimens in treatment- experienced patients with decompensated cirrhosis. These patients should be handled on a case by case basis with the patient, prescriber, and CCO or FFS medical director.

**Table 3: Recommended dosage of sofosbuvir/velpatasvir in pediatric patients 3 years of age and older:**

Body weight	Dosing of sofosbuvir/velpatasvir
Less than 17 kg	One 150 mg/37.5 mg pellet packet once daily
17 kg to less than 30 kg	One 200 mg/50 mg pellet packet OR tablet once daily
At least 30 kg	Two 200 mg/50 mg pellet packets once daily OR one 400 mg/100 mg tablet once daily

**Table 4: Recommended dosage of glecaprevir/pibrentasvir in pediatric patients 3 years of age and older:**

Body weight	Dosing of glecaprevir/pibrentasvir
Less than 20 kg	Three 50mg/20 mg pellet packets once daily
20 kg to less than 30 kg	Four 50 mg/20 mg pellet packets once daily
30 kg to less than 45 kg	Five 50 mg/20 mg pellet packets once daily
45 kg and greater OR 12 years of age and older	Three 100mg/40 mg tablets once daily

**POLICY NAME:**

**HEREDITARY ANGIOEDEMA (HAE)**

**Affected Medications:** BERINERT, CINRYZE, ICATIBANT ACETATE, SAJAZIR, HAEGARDA, RUCONEST, KALBITOR, TAKHZYRO, ORLADEYO

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>All Food and Drug Administration (FDA) approved indications not otherwise excluded by plan design</li> </ul>
<p><b>Required Medical Information:</b></p>	<ul style="list-style-type: none"> <li>Hereditary angioedema (HAE) official diagnosis documented in member’s chart <b>AND</b></li> <li>Laboratory confirmed diagnosis for HAE Type I or II:             <ul style="list-style-type: none"> <li>Low C4 level (C4 below the lower limit of normal as defined by the laboratory performing test) <b>AND</b> one of the following:                 <ul style="list-style-type: none"> <li>C1-inhibitor functional level less than 50% of the lower limit of normal as defined by the laboratory performing test <b>OR</b></li> <li>C1-inhibitor antigenic level less than 50% of the lower limit of normal as defined by the laboratory performing test</li> </ul> </li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>Family history of angioedema and the angioedema was refractory to a trial of antihistamine (e.g., diphenhydramine) for at least one month or confirmed factor 12 (FXII) mutation</li> <li>All other causes of acquired angioedema (e.g., medications, auto-immune diseases) have been excluded</li> <li>Documentation of requested number of units or doses and current weight</li> </ul> </li></ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b>Acute Treatment</b></p> <ul style="list-style-type: none"> <li>For requests to treat 3 or less attacks per month:             <ul style="list-style-type: none"> <li>Documentation of requested number of units or doses and current weight.</li> <li>Documentation of number of attacks requiring treatment in the past year. Authorization for therapy for acute treatment will provide a sufficient quantity to cover the number of attacks experienced in the last year plus 1 additional dose. Limited to having medication on hand to treat average number of acute attacks per month plus 1 additional dose.</li> </ul> </li> <li><b>Berinert:</b> Treatment of acute attacks 20 units/kg IV             <ul style="list-style-type: none"> <li>If 18 years or older, requires documented treatment failure (or documented intolerable adverse event) to icatibant acetate</li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>Currently receiving treatment with Berinert, excluding via samples or manufacturer’s patient assistance programs</li> </ul> </li> </ul>

- **Icatibant Acetate:** Treatment of acute attacks 30mg SQ. Additional doses may be administered at 6-hour intervals if response is inadequate or symptoms recur. Maximum 3 doses in 24 hours
- **Ruconest:** 50 units/kg IV, not to exceed 4200 units per dose. If attack symptoms persist, a second dose may be administered. Not to exceed 2 doses in 24 hours. (Effectiveness not demonstrated in patients with laryngeal attacks)
  - If 18 years or older, requires documented treatment failure (or documented intolerable adverse event) to icatibant acetate
  - OR**
  - If under 18 years of age, requires documented treatment failure (or documented intolerable adverse event) to Berinert
  - OR**
  - Currently receiving treatment with Ruconest, excluding via samples or manufacturer’s patient assistance programs.
- **Kalbitor:** Treatment of acute attacks 30mg SQ. If attack persists, an additional dose of 30mg may be given within 24 hours.
  - If 18 years or older, requires documented treatment failure (or documented intolerable adverse event) to icatibant acetate
  - OR**
  - If under 18 years of age, requires documented treatment failure (or documented intolerable adverse event) to Berinert
  - OR**
  - Currently receiving treatment with Kalbitor, excluding via samples or manufacturer’s patient assistance programs
- For requests to treat more than 3 attacks per month:
  - Documentation of number of attacks requiring treatment in the past year
  - Documentation of current treatment or failure, intolerance, or clinical rationale for avoidance of prophylactic therapies such as Haegarda, Takhzyro, Cinryze
  - Authorization for therapy for acute treatment will provide a sufficient quantity to cover the number of attacks experienced in the last year plus 1 additional dose. Limited to having medication on hand to treat average number of acute attacks per month plus 1 additional dose

**Reauthorization** requires documentation of number of acute attacks treated in the past year AND documentation of treatment success defined as reduction of frequency and severity of HAE attack episodes by greater than or equal to 50% from baseline

**Prophylaxis**

- Documentation of number of attacks requiring treatment in the past year
- At least ONE of the following:
  - Disabling symptoms for at least 5 days per month
  - Laryngeal edema or history of laryngeal edema
  - A history of self-limiting, non-inflammatory subcutaneous angioedema, without urticaria, which is recurrent and lasts greater than 12 hours
  - Self-limiting, recurrent abdominal pain without a clear organic cause lasting greater than 6 hours

**AND**

- A history of TWO or more severe attack(s) per month on average for the past 3 months (defined as an attack that significantly interrupts daily activities despite short-term treatment)
- **Cinryze Prophylaxis:** 1000 units IV twice a week.
  - Requires documented treatment failure (or documented intolerable adverse event) to Haegarda AND Takhzyro

**OR**

- Currently receiving treatment with Cinryze for prophylaxis, excluding via samples or manufacturer’s patient assistance programs and have had a greater than or equal to 50% reduction of frequency and severity of HAE attacks requiring acute therapy from baseline
- Doses up to 2,500 units (not exceeding 100 units/kg) may be appropriate if inadequate response with 1000 units
- **Orladeyo Prophylaxis:** 150 mg once daily.
  - Requires documented treatment failure (or documented intolerable adverse event) to Haegarda AND Takhzyro

**OR**

- Currently receiving treatment with Orladeyo for prophylaxis, excluding via samples or manufacturer’s patient assistance programs and have had a greater than or equal to 50% reduction of frequency and severity of HAE attacks requiring acute therapy from baseline

	<ul style="list-style-type: none"> <li>• <b>Haegarda Prophylaxis:</b> 60 units/kg SC twice a week</li> <li>• <b>Takhzyro Prophylaxis:</b> If patient is dosing every 2 weeks and has been attack free for 6 months, dosing will be reduced to every 4 weeks <ul style="list-style-type: none"> <li>○ 2 years of age to less than 6: 150 mg SC every 4 weeks</li> <li>○ 6 years of age to less than 12: 150 mg SC every 2 weeks</li> <li>○ 12 years of age and older: 300 mg SC every 2 weeks</li> </ul> </li> </ul> <p><b>Reauthorization</b> requires documentation of number of acute HAE attacks treated in the past year AND documentation of treatment success defined as reduction of frequency and severity of HAE attack episodes requiring acute therapy by greater than or equal to 50% from baseline</p> <ul style="list-style-type: none"> <li>• Dose-rounding to the nearest vial size within 10% of the prescribed dose will be enforced for all medical infusion drugs</li> </ul>

- Two or more pneumonias within 1 year
- Recurrent or deep skin abscesses
- Need for intravenous antibiotics to clear infections
- Two or more deep-seated infections including septicemia; AND
- Documentation showing a deficiency in producing antibodies in response to vaccination including all the following:
  - Titers that were drawn before challenging with vaccination
  - Titers that were drawn between 4 and 8 weeks after vaccination

**Idiopathic thrombocytopenia purpura (ITP)**

For Acute disease state:

- Documented use to manage acute bleeding due to severe thrombocytopenia (platelet counts less than 30,000/microliter)
- OR**
- To increase platelet counts prior to invasive surgical procedures, such as splenectomy. (Platelet counts less than 100,000/microliter)
- OR**
- Documented severe thrombocytopenia (platelet counts less than 20,000/microliter) and is considered to be at risk for intracerebral hemorrhage

Chronic Immune Thrombocytopenia (CIT):

- Documentation of increased risk for bleeding as indicated by a platelet count less than 30,000/microliter
- History of failure, contraindication, or intolerance with corticosteroids
- Duration of illness more than 6 months

**Chronic Inflammatory Demyelinating Polyneuropathy (CIDP):**

- Documented baseline in strength/weakness using objective clinical measuring tool (INCAT, Medical Research Council (MRC) muscle strength, 6 MWT, Rankin, Modified Rankin)
- Documented disease course is progressive or relapsing and remitting for 2 months or longer
- Abnormal or absent deep tendon reflexes in upper or lower limbs
- Electrodiagnostic testing indicating demyelination with one of the following:
  - Motor distal latency prolongation in 2 nerves
  - Reduction of motor conduction velocity in 2 nerves
  - Prolongation of F-wave latency in 2 nerves
  - Absence of F-waves in at least 1 nerve
  - Partial motor conduction block of at least 1 motor nerve
  - Abnormal temporal dispersion in at least 2 nerves
  - Distal CMAP duration increase in at least 1 nerve

- Cerebrospinal fluid (CSF) analysis indicates all the following (if electrophysiologic findings are nondiagnostic):
  - CSF white cell count of less than 10 cells/mm<sup>3</sup>
  - CSF protein is elevated (greater than 45 mg/dL)
- Refractory to or intolerant of corticosteroids (prednisolone, prednisone) given in therapeutic doses over at least three months

**Guillain-Barre Syndrome (Acute inflammatory polyneuropathy)**

- Documentation that the disease is severe (aid required to walk)
- Onset of symptoms are recent (less than 1 month)

**Pediatric HIV: Bacterial control or prevention**

- Approved for those 13 years of age and younger with HIV diagnosis
- Documented hypogammaglobulinemia (IgG less than 400mg/dL)

**OR**

- Functional antibody deficiency as demonstrated by either poor specific antibody titers or recurrent bacterial infections

**Myasthenia Gravis**

- Documented myasthenic crisis (impending respiratory or bulbar compromise)
- Documented use for an exacerbation (difficulty swallowing, acute respiratory failure, functional disability leading to discontinuation of physical activity)
- Documented failure with conventional therapy alone (azathioprine, cyclosporine and/or cyclophosphamide)

**Dermatomyositis/Polymyositis**

- Documented severe active disease state on physical exam
- Documentation of at least two of the following:
  - Proximal muscle weakness in all upper and/or lower limbs
  - Elevated serum creatine kinase (CK) or aldolase level
  - Interstitial lung disease (ILD)
  - Skin findings such as Gottron papules, Gottron sign, heliotrope eruption, poikiloderma
  - Nailfold abnormalities
  - Hyperkeratosis and fissuring of palms and lateral fingers
- Documented failure with a trial of corticosteroids (such as prednisone)
- Documented failure with a trial of an immunosuppressant (Methotrexate, azathioprine, cyclophosphamide)

**Complications of transplanted solid organ (kidney, liver, lung, heart, pancreas) and bone marrow transplant**

Coverage is provided for one or more of the following:

- Suppression of panel reactive anti-HLA antibodies prior to transplantation
- Treatment of antibody mediated rejection of solid organ transplantation
- Prevention of cytomegalovirus (CMV) induced pneumonitis

**Allogeneic Bone Marrow or Stem Cell Transplant**

- Approved in use for prevention of acute Graft- Versus- Host Disease (GVHD) or infection (such as cytomegalovirus)
- Documentation that the bone marrow transplant (BMT) was allogeneic
- Transplant was less than 100 days ago

**Kawasaki’s Disease (Pediatric)**

- Diagnosis or suspected diagnosis of Kawasaki’s disease
- 13 years of age or under

**Fetal alloimmune thrombocytopenia (FAIT)**

- Documentation of one or more of the following:
  - Previous FAIT pregnancy
  - Family history of the disease
  - Screening reveals platelet alloantibodies
- Authorization is valid until delivery date only

**Hemolytic disease of the newborn**

- Diagnosis or suspected diagnosis of hemolytic disease in newborn patient

**Auto-immune Mucocutaneous Blistering Diseases**

- Diagnosis confirmed by biopsy of one of the following:
  - Pemphigus vulgaris
  - Pemphigus foliaceus
  - Bullous Pemphigoid
  - Mucous Membrane Pemphigoid (Cicatricial Pemphigoid)
  - Epidermolysis bullosa aquisita
  - Pemphigus gestationis (Herpes gestationis)
  - Linear IgA dermatosis
- Documented severe disease that is extensive and debilitating

	<ul style="list-style-type: none"> <li>• Disease is progressive and refractory to a trial of conventional combination therapy with corticosteroids and immunosuppressive treatment (azathioprine, cyclophosphamide, mycophenolate mofetil)</li> </ul> <p><b>Chronic lymphocytic leukemia (CLL) with associated hypogammaglobulinemia</b></p> <ul style="list-style-type: none"> <li>• Documentation of an IgG level less than 500 mg/dL</li> <li>• A documented history of recurrent or chronic infections that have required intravenous antibiotics or hospitalization</li> </ul> <p><b>Toxic Shock Syndrome</b></p> <ul style="list-style-type: none"> <li>• Diagnosis or suspected diagnosis of toxic shock syndrome</li> </ul> <p><b>Pediatric Acute-Onset Neuropsychiatric Syndrome (PANS)/Pediatric Autoimmune Neuropsychiatric Disorder Associated with Streptococcal Infections (PANDAS)</b></p> <ul style="list-style-type: none"> <li>• A clinically appropriate trial of two or more less-intensive treatments was either not effective, not tolerated, or did not result in sustained improvement in symptoms, as measured by a lack of clinically meaningful improvement on a validated instrument directed at the patient’s primary symptom complex. --	---

**Dosing and Coverage Duration:**

- Dose-rounding to the nearest vial size within 10% of the prescribed dose will be enforced
- Approval durations are as stated below, unless otherwise specified

Indication	Dose	Approval Duration
PID	Up to 800 mg/kg every 3 to 4 weeks	Initial: up to 3 months Reauthorization: up to 12 months
CIDP	2 g/kg divided over 2-5 days for one dose then maintenance dosing of 1 g/kg every 21 days	Initial: up to 3 months Reauthorization: up to 12 months
ITP	1 g/kg once daily for 1-2 days  May be repeated monthly for chronic ITP	Acute ITP: <ul style="list-style-type: none"> <li>• Approval: 1 month only</li> </ul> Chronic ITP: <ul style="list-style-type: none"> <li>• Initial: up to 3 months</li> <li>• Reauthorization: up to 12 months</li> </ul>
FAIT	1 g/kg/week until delivery	Authorization is valid until delivery date only
Kawasaki's Disease (pediatric patients)	Up to 2 g/kg x 1 single dose	Approval: 1 month only
CLL	400 mg/kg every 3 to 4 weeks	Approval: up to 6 months
Pediatric HIV	400 mg/kg every 28 days	Initial: up to 3 months Reauthorization: up to 12 months
Guillain-Barre	400 mg/kg once daily for 5 days	Approval: maximum of 2 rounds of therapy within 6 weeks of onset; 2 months maximum
Myasthenia Gravis	Up to 2 g/kg x 1 dose (acute attacks)	Approval: 1 month (one course of treatment)
Auto-immune blistering diseases	Up to 2 g/kg divided over 5 days in a 28-day cycle	Approval: up to 6 months

	Dermatomyositis /Polymyositis	2 g/kg given over 2-5 days in a 28-day cycle	Initial: up to 3 months Reauthorization: up to 6 months
	Allogeneic Bone Marrow or Stem Cell Transplant	500 mg/kg/week x 90 days, then 500 mg/kg/month up to one-year post-transplant	Initial: up to 3 months Reauthorization: until up to one-year post-transplant
	Complications of transplanted solid organ: (kidney, liver, lung, heart, pancreas) transplant	2 g/kg divided over 5 days in a 28-day cycle	Initial: up to 3 months Reauthorization: up to 12 months
	Toxic shock syndrome	1 g/kg on day 1, followed by 500 mg/kg once daily on days 2 and 3	Approval: 1 month (one course of treatment)
	Hemolytic disease of the newborn	1 g/kg x 1 dose, may be repeated once if needed	Approval: 1 month (one course of treatment)
	PANS/PANDAS	Each dose: Up to 2 g/kg divided over 2-5 days	Initial: up to 3 months (3 monthly doses) Reauthorization: up to 3 months (3 monthly doses)  Total 6 monthly doses only
<b>Prescriber/Site of Care Restrictions:</b>	<ul style="list-style-type: none"> <li>Must be prescribed by a specialist for the condition being treated (such as neurologist, rheumatologist, immunologist, hematologist)</li> </ul>

- Skin psoriasis: present – two points, OR previously present by history – one point, OR a family history of psoriasis, if the patient is not affected – one point
- Nail lesions (onycholysis, pitting): one point
- Dactylitis (present or past, documented by a rheumatologist): one point
- Negative rheumatoid factor (RF): one point
- Juxta-articular bone formation on radiographs (distinct from osteophytes): one point

**Ankylosing Spondylitis, Non-radiographic Axial Spondyloarthritis**

- Diagnosis of axial spondyloarthritis (SpA) confirmed by sacroiliitis on imaging AND at least 1 spondyloarthritis feature:
  - Inflammatory back pain (4 of 5 features met):
    - Onset of back discomfort before the age of 40 years
    - Insidious onset
    - Improvement with exercise
    - No improvement with rest
    - Pain at night (with improvement upon arising)
  - Arthritis
  - Enthesitis
  - Uveitis
  - Dactylitis (inflammation of entire digit)
  - Psoriasis
  - Crohn’s disease/ulcerative colitis
  - Good response to nonsteroidal anti-inflammatory drugs (NSAIDs)
  - Family history of SpA
  - Elevated C-reactive protein (CRP)
- OR**
- HLA-B27 genetic test positive AND at least TWO SpA features
- Documentation of active disease defined by Bath ankylosing spondylitis disease activity index (BASDAI) at least 4 or equivalent objective scale

**Ulcerative Colitis and Crohn’s Disease**

- Diagnosis supported by colonoscopy/endoscopy/sigmoidoscopy/biopsy
- Documentation of moderate to severely active disease despite current treatment

**Uveitis**

- Documented diagnosis of noninfectious intermediate, posterior, or panuveitis

**Hidradenitis Suppurativa**

- Diagnosis of moderate to severe HS as defined by Hurley stage II or stage III disease
- Documentation of baseline count of abscesses and inflammatory nodules

**Generalized Pustular Psoriasis Flare**

- Diagnosis of generalized pustular psoriasis as confirmed by the following:
  - The presence of widespread sterile pustules arising on erythematous skin

	<ul style="list-style-type: none"> <li>○ Pustulation is not restricted to psoriatic plaques</li> <li>● Signs and symptoms of an acute GPP flare of moderate-to-severe intensity as follows: <ul style="list-style-type: none"> <li>○ A Generalized Pustular Psoriasis Physician Global Assessment (GPPGA) score of greater than or equal to 3</li> <li>○ A GPPGA pustulation score of greater than or equal to 2 (moderate to very high-density pustules)</li> <li>○ Greater than or equal to 5% body surface area (BSA) covered with erythema and the presence of pustules</li> </ul> </li> </ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b><u>All Indications</u></b></p> <ul style="list-style-type: none"> <li>● Coverage of Remicade or Infliximab (J1745) requires documentation of one of the following: <ul style="list-style-type: none"> <li>○ A documented intolerable adverse event to the preferred products, Inflectra, Avsola, Renflexis and the adverse event was not an expected adverse event attributed to the active ingredient</li> </ul> </li> </ul> <p><b><u>Rheumatoid Arthritis</u></b></p> <ul style="list-style-type: none"> <li>● Documented failure with at least 12 weeks of treatment with methotrexate <ul style="list-style-type: none"> <li>○ If unable to tolerate methotrexate or contraindications apply, another disease modifying antirheumatic drug (sulfasalazine, hydroxychloroquine, leflunomide)</li> </ul> </li> </ul> <p><b><u>Plaque Psoriasis</u></b></p> <ul style="list-style-type: none"> <li>● Documented treatment failure with 12 weeks of at least TWO systemic therapies: methotrexate, cyclosporine, acitretin, phototherapy [UVB, PUVA]</li> </ul> <p><b><u>Psoriatic Arthritis</u></b></p> <ul style="list-style-type: none"> <li>● Documented failure with at least 12 weeks of treatment with methotrexate <ul style="list-style-type: none"> <li>○ If unable to tolerate methotrexate or contraindications apply, another disease modifying antirheumatic drug (sulfasalazine, cyclosporine, leflunomide)</li> </ul> </li> </ul> <p><b><u>Ankylosing Spondylitis, Non-radiographic Axial Spondyloarthritis</u></b></p> <ul style="list-style-type: none"> <li>● Documented failure with two daily prescription strength nonsteroidal anti-inflammatory drugs (ibuprofen, naproxen, diclofenac, meloxicam, etc.) with minimum 1 month trial each</li> <li><b>OR</b></li> <li>● For peripheral arthritis: documented treatment failure with locally administered parenteral glucocorticoid</li> </ul> <p><b><u>Crohn's disease</u></b></p> <ul style="list-style-type: none"> <li>● Documented treatment failure with at least two oral treatments for minimum of 12 weeks trial: corticosteroids, azathioprine, 6-mercaptopurine, methotrexate, sulfasalazine, balsalazide</li> <li><b>OR</b></li> <li>● Documentation of previous surgical intervention for Crohn's disease</li> <li><b>OR</b></li> <li>● Documentation of severe, high-risk disease on colonoscopy defined by one of the following: <ul style="list-style-type: none"> <li>○ Fistulizing disease</li> <li>○ Stricture</li> </ul> </li> </ul>

- Presence of abscess/phlegmon
- Deep ulcerations
- Large burden of disease including ileal, ileocolonic, or proximal gastrointestinal involvement

**Uveitis**

- Documented failure with at least 12 weeks of TWO of the following: an immunosuppressive agent such as: methotrexate, azathioprine, mycophenolate or a calcineurin inhibitor such as cyclosporine, tacrolimus

**Hidradenitis Suppurativa**

- Documented failure with at least 12 weeks of oral antibiotics (such as doxycycline, tetracycline, minocycline, or clindamycin plus rifampin)
- Documented failure with 8 weeks on a systemic retinoid (isotretinoin or acitretin)

**Ulcerative Colitis**

- Documented failure with at least two oral treatments for a minimum of 12 weeks: corticosteroids, sulfasalazine, mesalamine, balsalazide, cyclosporine, azathioprine, 6-mercaptopurine

**OR**

- Documentation of severely active disease despite current treatment defined by greater than or equal to 6 bloody, loose stools per day with severe cramps and evidence of systemic toxicity (fever, tachycardia, anemia, and/or elevated CRP/ESR), or recent hospitalization for ulcerative colitis

**Generalized Pustular Psoriasis Flare**

- Documented 1 week treatment failure of acute disease flare (or documented intolerable adverse event) with:
  - Cyclosporine

**QL**

- Dose-rounding to the nearest vial size within 10% of the prescribed dose will be enforced
- CD/UC/HS: 5 mg/kg at 0, 2 and 6 weeks followed by 5 mg/kg every 8 weeks thereafter. For those who respond and lose response, consideration may be given to treatment with 10 mg/kg
- PsA/PP/GPP: 5 mg/kg at 0, 2 and 6 weeks followed by 5 mg/kg every 8 weeks thereafter
- RA: 3 mg/kg at 0, 2 and 6 weeks followed by 3 mg/kg every 8 weeks thereafter. For those with an incomplete response, consideration may be given for dosing up to 10 mg/kg or as often as every 4 weeks
- AS: 5 mg/kg at 0, 2 and 6 weeks followed by 5 mg/kg every 6 weeks thereafter

**Reauthorization**

- Documentation of treatment success and clinically significant response to therapy

<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Concurrent use with any other targeted immune modulator is considered experimental and is not a covered benefit</li> </ul>
<b>Age Restriction:</b>

- **ROP** – 0.4 mg (0.01 mL) single injection per affected eye(s); may repeat dose after a minimum interval of 10 days
- Eylea HD Dosing
- Approval requires documentation of one of the following:
    - Treatment failure or intolerable adverse event with at least 3 months of ranibizumab (preferred biosimilar products: Byooviz, Cimerli)
  - **AMD and DME** – 8 mg (0.07 mL) every 4 weeks for the first 3 injections followed by 8 mg (0.07 mL) every 8 to 16 weeks
    - Every 4-week dosing is limited to the first 3 injections only
  - **DR** - 8 mg (0.07 mL) every 4 weeks for the first 3 injections followed by 8 mg (0.07 mL) every 8 weeks to 12 weeks
    - Every 4-week dosing is limited to the first 3 injections only
- Lucentis Dosing
- Approval requires documentation of adverse event not attributed to the active ingredient to a biosimilar product (preferred biosimilar products: Byooviz, Cimerli)
  - **AMD and RVO** – maximum 0.5mg every 4 weeks
  - **DME and DR** – 0.3 mg every 28 days
  - **mCNV** - 0.5 mg monthly for up to 3 months
  - **ROP** – 0.1 to 0.3 mg as a single injection in the affected eye(s); dose may be repeated up to 2 times at a minimum of 28-day intervals
- Beovu Dosing
- **AMD** – 6 mg every month for the first three doses, followed by 6 mg every 8-12 weeks
  - **DME** – 6 mg every six weeks for the first five doses, followed by 6 mg every 8-12 weeks
- Susvimo Dosing
- Must be established on ranibizumab (preferred biosimilar products: Byooviz, Cimerli) injections with response to treatment for a minimum of 6 months at standard dosing (0.5mg every 4 weeks)
  - AMD– 2mg administered continuously via ocular implant with refills every 24 weeks.
- Vabysmo Dosing
- Approval requires documented treatment failure or intolerable adverse event with at least 3 months of ranibizumab (preferred biosimilar products: Byooviz, Cimerli)
  - **AMD** – 6 mg every 4 weeks for the first 4 injections, followed by 6 mg every 8 to 16 weeks
    - Some patients may require continued every 4-week injections following the initial doses
  - **DME**
    - Fixed interval regimen: 6 mg every 4 weeks for the first 6 injections, followed by

	<p>6 mg every 8 weeks</p> <ul style="list-style-type: none"> <li>○ Variable interval regimen: 6 mg once every 4 weeks for at least the first 4 injections, followed by 6 mg every 4 to 16 weeks (based on visual assessments)</li> <li>○ Some patients may require continued every 4-week injections following the initial doses</li> </ul> <ul style="list-style-type: none"> <li>● <b>RVO</b> - 6 mg (0.05 mL) every 4 weeks for up to 6 months</li> </ul> <p><b>Reauthorization</b> requires documentation of vision stability defined as losing fewer than 15 letters of visual acuity and/or improvements in visual acuity with evidence of decreased leakage and/or fibrosis (central retinal thickness)</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>● Evidence of a current ocular or periocular infections</li> <li>● Active intraocular inflammation (afibercept)</li> </ul>

<p><b>Required Medical Information:</b></p>	<ul style="list-style-type: none"> <li>• Diagnosis of pyruvate kinase deficiency (PKD), defined by <b>ALL</b> the following:             <ul style="list-style-type: none"> <li>○ Presence of at least two mutant alleles in the pyruvate kinase liver and red blood cell (PKLR) gene</li> <li>○ At least one of the mutant alleles is a missense mutation</li> </ul> </li> </ul> <p><b>ONE</b> of the following applies:</p> <ul style="list-style-type: none"> <li>• If receiving regular transfusions, documentation of <b>ALL</b> the following:             <ul style="list-style-type: none"> <li>○ A minimum of 6 transfusion episodes in the 12-month period prior to treatment</li> <li>○ Baseline transfusion amount, including date of transfusion and number of red blood cell (RBC) units transfused</li> </ul> </li> </ul> <p><b>OR</b></p> <ul style="list-style-type: none"> <li>• If not receiving regular transfusions, documentation of <b>ALL</b> the following:             <ul style="list-style-type: none"> <li>○ No more than 4 transfusions in the 12-month period prior to treatment and no transfusions in the 3-month period prior to treatment</li> <li>○ Baseline hemoglobin (Hb) must be less than or equal to 10 g/dL</li> </ul> </li> </ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b>Reauthorization:</b> documentation of treatment success and a clinically significant response to therapy, defined as:</p> <ul style="list-style-type: none"> <li>• <u>For patients receiving regular transfusions at baseline:</u> must document greater than or equal to a 33% reduction in RBC units transfused compared to baseline</li> <li>• <u>For patients not receiving regular transfusions at baseline:</u> must document greater than or equal to a 1.5 g/dL increase in Hb from baseline sustained at 2 or more scheduled visits AND no transfusions were needed</li> <li>• Discontinue therapy after 6 months if no benefit in transfusion requirement or Hb has been observed</li> </ul> <ul style="list-style-type: none"> <li>• Dose: Approve 5 mg, 20 mg, and 50 mg tablets (QL of 56 per 28 days) per dosing schedule below</li> </ul>

**Table 1: Dose Titration Schedule**

Duration	Dosage
Week 1 through Week 4	5 mg twice daily
Week 5 through Week 8	<p>If Hb is below normal range or patient has required a transfusion within the last 8 weeks:</p> <ul style="list-style-type: none"> <li>• Increase to 20 mg twice daily and maintain for 4 weeks.</li> </ul> <p>If Hb is within normal range and patient has not required a transfusion within the last 8 weeks:</p> <ul style="list-style-type: none"> <li>• Maintain 5 mg twice daily.</li> </ul>
Week 9 through Week 12	<p>If Hb is below normal range or patient has required a transfusion within the last 8 weeks:</p> <ul style="list-style-type: none"> <li>• Increase to 50 mg twice daily and maintain thereafter.</li> </ul> <p>If Hb is within normal range and patient has not required a transfusion within the last 8 weeks:</p> <ul style="list-style-type: none"> <li>• Maintain current dose (5 mg twice daily or 20 mg twice daily).</li> </ul>
Maintenance	If Hb decreases, consider up-titration to the maximum of 50 mg twice daily as per the above schedule.

**Exclusion Criteria:**

- Homozygous for the c.1436G>A (p.R479H) variant or have 2 non-missense variants (without the presence of another missense variant) in the PKLR gene
- Splenectomy scheduled during treatment or have undergone within the 12-month period prior to starting treatment
- Previous bone marrow or stem cell transplant
- Receiving hematopoietic stimulating agents or anabolic steroids (including testosterone preparations) within 28 days prior to treatment

**Age Restriction:**

- Must be 18 years or older

**Prescriber Restrictions:**

- Prescribed by, or in consultation with, a hematologist

**Coverage Duration:**

- Initial Authorization: 6 months, unless otherwise specified
- Reauthorization: 12 months, unless otherwise specified

**POLICY NAME:**  
**MOMETASONE SINUS IMPLANT**

**Affected Medications:** SINUVA (mometasone sinus implant)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ Treatment of chronic rhinosinusitis with nasal polyps in patients who have had ethmoid sinus surgery</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<p>Documentation of both of the following:</p> <ul style="list-style-type: none"> <li>• Diagnosis of chronic rhinosinusitis and has undergone prior bilateral total ethmoidectomy</li> <li>• Indicated for revision endoscopic sinus surgery due to recurrent symptoms of nasal polyps (such as nasal obstruction/congestion, bilateral sinus obstruction)</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Documented treatment failure with at least 3 months of two intranasal corticosteroids after ethmoidectomy</li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• History of previous Sinuva implant use</li> <li>• Known history of resistant or poor response to oral steroids</li> <li>• Acute bacterial or invasive fungal sinusitis</li> <li>• Immune deficiency (including cystic fibrosis)</li> </ul>

**When requested via the PHARMACY benefit:**

Coverage for the non-preferred products, Neulasta, Flyneta, Rolvedon, Stimufend, and Nyvepria is provided when the member meets one of the following criteria:

- Documented treatment failure or intolerable adverse event to **Ziextenzo, Fulphila and Udenyca**

**When requested via the MEDICAL benefit:**

Coverage for the non-preferred products, Neulasta, Nyvepria, Fulphila, and Flyneta is provided when the member meets the following criteria:

- Documented treatment failure or intolerable adverse event to **Ziextenzo or Udenyca**

**Eflapegrastim product: Rolvedon**

Coverage for the non-preferred product, Rolvedon, is provided when the member meets the following criteria:

- Documented treatment failure or intolerable adverse event to the preferred pegfilgrastim products

**For prophylaxis of febrile neutropenia (FN) or other dose-limiting neutropenic events for patients receiving myelosuppressive anticancer drugs:**

Meets **ONE** of the following:

- **Curative Therapy:**
  - High risk (greater than 20% risk) for febrile neutropenia based on chemotherapy regimen **OR**
  - Intermediate risk (10-20% risk) for febrile neutropenia based on chemotherapy regimen with documentation of significant patient risk factors for serious medical consequences **OR**
  - Has experienced a dose-limiting neutropenic event on a previous cycle of current chemotherapy to be continued
- **Palliative Therapy:**
  - Myeloid growth factors will not be approved upfront for prophylaxis of febrile neutropenia in the palliative setting. Per the NCCN (National Comprehensive Cancer Network), chemotherapy regimens with a 20% or greater risk of neutropenic events should not be used. If, however, a dose limiting neutropenic event occurs on a previous cycle of chemotherapy, and the effectiveness of chemotherapy will be reduced with dose reduction, growth factor will be approved for secondary prophylaxis on a case by case basis

**For Treatment of Severe Chronic Neutropenia:**

- Must meet ALL the following:
  - Congenital neutropenia, cyclic neutropenia, OR idiopathic neutropenia
  - Current documentation of absolute neutrophil count (ANC) less than 500 cells/microL
  - Neutropenia symptoms (fever, infections, oropharyngeal ulcers)

<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"><li>• Prescribed by, or in consultation with, an oncologist or hematologist</li></ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"><li>• 6 months, unless otherwise specified</li></ul>

**PROSTAGLANDIN INTRACAMERAL IMPLANTS**

Affected Medications: DURYSTA (bimatoprost intracameral implant), iDose TR (travoprost intracameral implant)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ Reduction of intraocular pressure (IOP) in patients with open angle glaucoma (OAG) or ocular hypertension (OHT)</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Diagnosis of OAG or OHT with a baseline IOP of at least 22 mmHg</li> <li>• Documentation of clinical justification for inability to manage routine topical therapy (e.g., due to progression of glaucoma, aging, comorbidities, and administration difficulties that cannot be addressed through instruction and technique)</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Documented treatment failure or intolerable adverse event with at least two IOP-lowering agents with different mechanisms of action, (used concurrently), one of which must include a prostaglandin analog such as latanoprost</li> <li>• For iDose TR requests:               <ul style="list-style-type: none"> <li>○ Documented treatment failure to the preferred product Durysta</li> </ul> </li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Repeat implantation with the same prostaglandin implant</li> <li>• Diagnosis of corneal endothelial cell dystrophy (e.g., Fuchs' Dystrophy)</li> <li>• Prior corneal or endothelial cell transplantation (e.g., Descemet's Stripping Automated Endothelial Keratoplasty [DSAEK])</li> <li>• Active or suspected ocular or periocular infections</li> <li>• Absent or ruptured posterior lens capsule (Durysta)</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• 18 years of age and older</li> </ul>
<b>Prescriber/Site of Care Restrictions:</b>	<ul style="list-style-type: none"> <li>• Must be prescribed by, or in consultation with, an ophthalmologist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Authorization: 1 month (one implant per impacted eye), unless otherwise specified</li> </ul>

**POLICY NAME:**

**PROXIMAL COMPLEMENT INHIBITOR**

**Affected Medications:** EMPAVELI (pegcetacoplan), FABHALTA (iptacopan)

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design             <ul style="list-style-type: none"> <li>○ Treatment of adult patients with paroxysmal nocturnal hemoglobinuria (PNH)</li> <li>○ Reduce proteinuria in adults with primary immunoglobulin A nephropathy (IgAN) at risk of rapid disease progression, generally a urine protein-to-creatinine ratio (UPCR) <math>\geq 1.5</math> g/g (Fabhalta)</li> </ul> </li> </ul>
<p><b>Required Medical Information:</b></p>	<ul style="list-style-type: none"> <li>• Patients must be administered a meningococcal vaccine at least two weeks prior to initiation of the requested therapy and revaccinated according to current Advisory Committee on Immunization Practices (ACIP) guidelines</li> </ul> <p><b><u>PNH</u></b></p> <ul style="list-style-type: none"> <li>• Detection of PNH clones of at least 5% by flow cytometry diagnostic testing             <ul style="list-style-type: none"> <li>○ Presence of at least 2 different glycosylphosphatidylinositol (GPI) protein deficiencies (e.g., CD55, CD59, etc.) within at least 2 different cell lines (e.g., granulocytes, monocytes, erythrocytes)</li> </ul> </li> <li>• Baseline lactate dehydrogenase (LDH) levels greater than or equal to 1.5 times the upper limit of normal range</li> <li>• One of the following PNH-associated clinical findings:             <ul style="list-style-type: none"> <li>○ Presence of a thrombotic event</li> <li>○ Presence of organ damage secondary to chronic hemolysis</li> <li>○ History of 4 or more blood transfusions required in the previous 12 months</li> </ul> </li> </ul> <p><b><u>IgAN (Fabhalta)</u></b></p> <ul style="list-style-type: none"> <li>• Diagnosis of IgAN confirmed with biopsy</li> <li>• Documentation of one of the following (with labs current within 30 days of request):             <ul style="list-style-type: none"> <li>○ Proteinuria defined as equal to or greater than 1 g/day</li> <li>○ UPCR greater than 1.5 g/g</li> </ul> </li> </ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b><u>PNH</u></b></p> <ul style="list-style-type: none"> <li>• For Empaveli: Documented inadequate response, contraindication, or intolerance to ravulizumab (Ultomiris)</li> <li>• For Fabhalta: Documented inadequate response, contraindication, or intolerance to another complement inhibitor such as ravulizumab (Ultomiris) or Empaveli</li> </ul> <p><b><u>Reauthorization</u></b> requires documentation of treatment success defined as a decrease in serum LDH, stabilized/improved hemoglobin, decreased transfusion requirement, and reduction in thromboembolic events compared to baseline</p> <p><b><u>IgAN (Fabhalta)</u></b></p> <ul style="list-style-type: none"> <li>• Documented treatment failure (defined as proteinuria equal to or greater than 1 g/day)</li> </ul>

	<p>OR UPCR greater than 1.5 g/g) with a minimum of 12 weeks of all of the following:</p> <ul style="list-style-type: none"> <li>○ Maximum tolerated dose of an angiotensin-converting enzyme (ACE) inhibitor or angiotensin receptor blocker (ARB)</li> <li>○ High dose glucocorticoid therapy such as oral prednisone or methylprednisolone (or an adverse effect to two or more glucocorticoid therapies that is not associated with the corticosteroid class)</li> <li>○ Filspari (sparsentan)</li> </ul> <p><b>Reauthorization</b> requires documentation of treatment success defined as reduction in UPCR or proteinuria from baseline</p>
<p><b>Exclusion Criteria:</b></p>	<ul style="list-style-type: none"> <li>● Concurrent use with other biologics for PNH (Soliris, Ultomiris, Empaveli, or Fabhalta) except when cross tapering according to FDA approved dosing</li> <li>● Current meningitis infection or other unresolved serious infection caused by encapsulated bacteria</li> </ul>
<p><b>Age Restriction:</b></p>	<ul style="list-style-type: none"> <li>● 18 years of age and older</li> </ul>
<p><b>Prescriber Restrictions:</b></p>	<ul style="list-style-type: none"> <li>● Prescribed by, or in consultation with, a hematologist or a nephrologist</li> </ul>
<p><b>Coverage Duration:</b></p>	<ul style="list-style-type: none"> <li>● Initial Authorization: 3 months, unless otherwise specified</li> <li>● Reauthorization: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**

PYRIMETHAMINE

**Affected Medications:** PYRIMETHAMINE

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ Toxoplasmosis</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Documentation of recent <i>Toxoplasma</i> infection</li> <li>• Documentation of one of the following:               <ul style="list-style-type: none"> <li>○ Severe symptoms (pneumonitis, myocarditis, etc) or prolonged symptoms greater than 4 weeks with significant impact on quality of life</li> <li>○ Immunocompromised status</li> </ul> </li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Dosing Regimen (adult):               <ul style="list-style-type: none"> <li>○ Day 1: Pyrimethamine 100mg, sulfadiazine 2-4gm divided four times daily, leucovorin 5-25mg</li> <li>○ Day 2: Pyrimethamine 25-50mg, sulfadiazine 2-4gm divided four times daily, leucovorin 5-25mg</li> <li>○ Day 3 and beyond: Pyrimethamine 25-50mg, sulfadiazine 500mg-1 gm divided four times daily, leucovorin 5-25mg</li> </ul> </li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Treatment regimen does not contain leucovorin and a sulfonamide (or alternative if allergic to sulfa)</li> </ul>
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial Authorization: Up to 6 weeks, with no reauthorization unless otherwise specified</li> </ul>

**POLICY NAME:**  
**RAVULIZUMAB-CWVZ**

**Affected Medications:** ULTOMIRIS (ravulizumab-cwvz)

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design             <ul style="list-style-type: none"> <li>○ Paroxysmal nocturnal hemoglobinuria (PNH) to reduce hemolysis</li> <li>○ Atypical hemolytic uremic syndrome (aHUS) to inhibit complement-mediated thrombotic microangiopathy</li> <li>○ Generalized myasthenia gravis (gMG) in adult patients who are anti-acetylcholine receptor (AChR) antibody positive</li> <li>○ Neuromyelitis optica spectrum disorder (NMOSD) who are anti-aquaporin-4 (AQP4) antibody positive for adult patients</li> </ul> </li> </ul>
<p><b>Required Medical Information:</b></p>	<p><b><u>PNH</u></b></p> <ul style="list-style-type: none"> <li>• Detection of PNH clones of at least 5% by flow cytometry diagnostic testing             <ul style="list-style-type: none"> <li>○ Presence of at least 2 different glycosylphosphatidylinositol (GPI) protein deficiencies (e.g., CD55, CD59, etc.) within at least 2 different cell lines (e.g., granulocytes, monocytes, erythrocytes)</li> </ul> </li> <li>• Baseline lactate dehydrogenase (LDH) levels greater than or equal to 1.5 times the upper limit of normal range</li> <li>• One of the following PNH-associated clinical findings:             <ul style="list-style-type: none"> <li>○ Presence of a thrombotic event</li> <li>○ Presence of organ damage secondary to chronic hemolysis</li> <li>○ History of 4 or more blood transfusions required in the previous 12 months</li> </ul> </li> </ul> <p><b><u>aHUS</u></b></p> <ul style="list-style-type: none"> <li>• Clinical presentation of microangiopathic hemolytic anemia, thrombocytopenia, and acute kidney injury</li> <li>• Patient shows signs of thrombotic microangiopathy (TMA) (e.g., changes in mental status, seizures, angina, dyspnea, thrombosis, increasing blood pressure, decreased platelet count, increased serum creatinine, increased LDH, etc.)</li> <li>• ADAMTS13 activity level greater than or equal to 10%</li> <li>• Shiga toxin E. coli related hemolytic uremic syndrome (ST-HUS) has been ruled out</li> <li>• History of 4 or more blood transfusions required in the previous 12 months</li> </ul> <p><b><u>gMG</u></b></p> <ul style="list-style-type: none"> <li>• Diagnosis of gMG confirmed by <b>ONE</b> of the following:             <ul style="list-style-type: none"> <li>○ A history of abnormal neuromuscular transmission test</li> <li>○ A positive edrophonium chloride test</li> <li>○ Improvement in gMG signs or symptoms with an acetylcholinesterase inhibitor</li> </ul> </li> <li>• Myasthenia Gravis Foundation of America (MGFA) Clinical Classification Class II to IV</li> <li>• Positive serologic test for AChR antibodies</li> <li>• Documentation of <b>ONE</b> of the following:</li> </ul>

- MG-Activities of Daily Living (MG-ADL) total score of 6 or greater
- Quantitative Myasthenia Gravis (QMG) total score of 12 or greater

**NMOSD**

- Diagnosis of NMOSD with aquaporin-4 immunoglobulin G (AQP4- IgG) antibody positive disease confirmed by all the following:
  - Documentation of positive test for AQP4-IgG antibodies via cell-based assay
  - Exclusion of alternative diagnoses (such as multiple sclerosis)
  - At least **one** core clinical characteristic:
    - Acute optic neuritis
    - Acute myelitis
    - Area postrema syndrome (episode of otherwise unexplained hiccups or nausea/vomiting)
    - Acute brainstem syndrome
    - Symptomatic narcolepsy **OR** acute diencephalic clinical syndrome with NMSOD-typical diencephalic MRI lesions
    - Symptomatic cerebral syndrome with NMOSD-typical lesion on magnetic resonance imaging (MRI) [see table below]
    - Acute cerebral syndrome with NMOSD-typical brain lesion on MRI [see table below]

Clinical presentation	Possible MRI findings
Diencephalic syndrome	<ul style="list-style-type: none"> <li>● Periependymal lesion</li> <li>● Hypothalamic/thalamic lesion</li> </ul>
Acute cerebral syndrome	<ul style="list-style-type: none"> <li>● Extensive periependymal lesion</li> <li>● Long, diffuse, heterogenous, or edematous corpus callosum lesion</li> <li>● Long corticospinal tract lesion</li> <li>● Large, confluent subcortical or deep white matter lesion</li> </ul>

**Appropriate Treatment Regimen & Other Criteria:**

**aHUS**

- Failure to respond to plasma therapy within 10 days
  - Trial of plasma therapy not required if one of the following is present:
    - Life-threatening complications of HUS such as seizures, coma, or heart failure
    - Confirmed presence of a high-risk complement genetic variant (e.g., CFH or CFI)

	<p><b><u>gMG</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of one of the following: <ul style="list-style-type: none"> <li>○ Treatment failure with an adequate trial (one year or more) of at least 2 immunosuppressive therapies (azathioprine, mycophenolate, tacrolimus, cyclosporine, methotrexate)</li> <li>○ Has required three or more courses of rescue therapy (plasmapheresis/plasma exchange and/or intravenous immunoglobulin), while on at least one immunosuppressive therapy, over the last 12 months</li> </ul> </li> <li>• Documented inadequate response, contraindication, or intolerance to efgartigimod-alfa (Vyvgart)</li> </ul> <p><b><u>NMOSD</u></b></p> <ul style="list-style-type: none"> <li>• Documented inadequate response, contraindication, or intolerance to <b>ALL</b> the following: <ul style="list-style-type: none"> <li>○ Rituximab (preferred products: Riabni, Ruxience, Truxima)</li> <li>○ Satralizumab-mwge (Enspryng)</li> <li>○ Inebilizumab-cdon (Uplizna)</li> </ul> </li> </ul> <p><b><u>Reauthorization requires:</u></b></p> <ul style="list-style-type: none"> <li>• gMG: documentation of treatment success defined as an improvement in MG-ADL or QMG scores from baseline</li> <li>• PNH: documentation of treatment success defined as a decrease in serum LDH, stabilized/improved hemoglobin, decreased transfusion requirement, and reduction in thromboembolic events compared to baseline</li> <li>• aHUS: documentation of treatment success defined as a decrease in serum LDH, stabilized/improved serum creatinine, increased platelet count, and decreased plasma exchange/infusion requirement compared to baseline</li> <li>• NMOSD: documentation of treatment success defined as the stabilization or improvement in neurological symptoms as evidenced by a decrease in acute relapses, Expanded Disability Status Scale (EDSS) score, hospitalizations, or plasma exchange</li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Current meningitis infection</li> <li>• Concurrent use with other disease-modifying biologics for requested indication, unless indicated by the FDA for combination use with Ultomiris</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• PNH, aHUS: 1 month of age and older</li> <li>• gMG: 18 years and older</li> </ul>
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a specialist: <ul style="list-style-type: none"> <li>○ PNH: Hematologist</li> <li>○ aHUS: Hematologist or Nephrologist</li> <li>○ gMG: Neurologist</li> <li>○ NMOSD: neurologist or neuro-ophthalmologist</li> </ul> </li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial Authorization: 3 months, unless otherwise specified</li> <li>• Reauthorization: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**

REMOTULIN

**Affected Medications:** REMOTULIN INJECTION (treprostinil)

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design <ul style="list-style-type: none"> <li>○ Pulmonary Arterial Hypertension (PAH) World Health Organization (WHO) Group 1</li> <li>○ Pulmonary Arterial Hypertension in Patients Requiring Transition from Epoprostenol</li> </ul> </li> </ul>
<p><b>Required Medical Information:</b></p>	<p><b><u>Pulmonary arterial hypertension (PAH) WHO Group 1</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of PAH confirmed by right-heart catheterization meeting the following criteria: <ul style="list-style-type: none"> <li>○ Mean pulmonary artery pressure of at least 20 mm Hg</li> <li>○ Pulmonary capillary wedge pressure less than or equal to 15 mm Hg AND</li> <li>○ Pulmonary vascular resistance of at least 2.0 Wood units</li> </ul> </li> <li>• Etiology of PAH: idiopathic PAH, hereditary PAH, OR</li> <li>• PAH secondary to one of the following conditions: <ul style="list-style-type: none"> <li>○ Connective tissue disease</li> <li>○ Human immunodeficiency virus (HIV) infection</li> <li>○ Cirrhosis</li> <li>○ Anorexigens</li> <li>○ Congenital left to right shunts</li> <li>○ Schistosomiasis</li> <li>○ Drugs and toxins</li> <li>○ Portal Hypertension</li> </ul> </li> <li>• New York Heart Association (NYHA)/World Health Organization (WHO) Functional Class II or higher symptoms</li> <li>• Documentation of acute vasoreactivity testing (positive result requires trial/failure to calcium channel blocker) unless contraindications: <ul style="list-style-type: none"> <li>○ Low systemic blood pressure (systolic blood pressure less than 90)</li> <li>○ Low cardiac index OR</li> <li>○ Presense of severe symptoms (functional class IV)</li> </ul> </li> </ul>
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<ul style="list-style-type: none"> <li>• The pulmonary hypertension has progressed despite maximal medical and/or surgical treatment of the identified condition</li> <li>• Documentation that treprostinil is used as a single route of administration (Remodulin, Tyvaso, Orenitram should not be used in combination)</li> <li>• Treatment with oral calcium channel blocking agents has been tried and failed, or has been considered ruled out</li> <li>• Treatment with combination of endothelin receptor antagonist (ERA) and phosphodiesterase 5 inhibitor (PDE5I) has been tried and failed for WHO Functional Class II and III symptoms</li> </ul>

	<p><b>Reauthorization</b> requires documentation of treatment success defined as one or more of the following:</p> <ul style="list-style-type: none"> <li>• Improvement in walking distance</li> <li>• Improvement in exercise ability</li> <li>• Improvement in pulmonary function</li> <li>• Improvement or stability in WHO functional class</li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• PAH secondary to pulmonary venous hypertension (e.g., left sided atrial or ventricular disease, left sided valvular heart disease, etc.) or disorders of the respiratory system (e.g., chronic obstructive pulmonary disease, interstitial lung disease, obstructive sleep apnea or other sleep disordered breathing, alveolar hypoventilation disorders, etc.)</li> </ul>
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a cardiologist or pulmonologist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial coverage: 6 months, unless otherwise specified</li> <li>• Subsequent coverage: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**

RESLIZUMAB

**Affected Medications:** CINQAIR IV (reslizumab-interleukin-5 antagonist monoclonal antibody (IgG4 kappa))

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design <ul style="list-style-type: none"> <li>○ Add-on maintenance treatment of adult patients with severe asthma with an eosinophilic phenotype</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Diagnosis of severe asthma with an eosinophilic phenotype, defined by both of the following: <ul style="list-style-type: none"> <li>○ Baseline eosinophil count of at least 400 cells/<math>\mu</math>L <b>AND</b></li> <li>○ FEV1 less than 80% at baseline or FEV1/FVC reduced by at least 5% from normal</li> </ul> </li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Documented use of high-dose inhaled corticosteroid (ICS) plus a long-acting beta agonist (LABA) for at least three months with continued symptoms AND</li> <li>• Documentation of one of the following: <ul style="list-style-type: none"> <li>○ Documented history of 2 or more asthma exacerbations requiring oral or systemic corticosteroid treatment in the past 12 months while on combination inhaler treatment and at least 80% adherence</li> <li>○ Documentation that chronic daily oral corticosteroids are required</li> </ul> </li> <li>• Documented treatment failure or intolerable adverse event with all of the preferred products (Dupixent, Fasenna, Nucala, and Xolair)</li> <li>• Availability: 100 mg/10 mL vials</li> <li>• Dose-rounding to the nearest vial size within 10% of the prescribed dose will be enforced</li> </ul> <p><b>Reauthorization:</b> documentation of treatment success and a clinically significant response to therapy</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Use in combination with another monoclonal antibody (e.g., Dupixent, Nucala, Xolair, Fasenna, Tezspire)</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• 18 years of age and older</li> </ul>

- Diagnosis confirmed with magnetic resonance imaging (MRI), per revised McDonald diagnostic criteria for MS
  - Clinical evidence alone will suffice; additional evidence desirable but must be consistent with MS

**CIS**

- Documentation of a monophasic clinical episode, with patient-reported symptoms and corresponding objective clinical evidence as follows: One or more T2-hyperintense lesions that are characteristic of MS in at least two of four MS-typical regions (periventricular, cortical or juxtacortical, infratentorial brain regions, and the spinal cord)

**Active SPMS**

- Documented history of RRMS, followed by gradual and persistent worsening in neurologic function over at least 6 months (independent of relapses)
- Evidence of active SPMS, as shown by ongoing clinical relapses and/or inflammatory activity (i.e., gadolinium enhancing lesions **OR** new or enlarging lesions)
- Documentation of Expanded Disability Status Scale (EDSS) score of 3.0 to 6.5

**NMOSD**

- Diagnosis of seropositive aquaporin-4 immunoglobulin G (AQP4-IgG) NMOSD confirmed by all the following:
  - Documentation of AQP4-IgG-specific antibodies on cell-based assay
  - Exclusion of alternative diagnoses (such as multiple sclerosis)
  - At least **one** core clinical characteristic:
    - Acute optic neuritis
    - Acute myelitis
    - Acute area postrema syndrome (episode of otherwise unexplained hiccups or nausea/vomiting)
    - Acute brainstem syndrome
    - Symptomatic narcolepsy **OR** acute diencephalic clinical syndrome with NMOSD-typical diencephalic lesion on magnetic resonance imaging (MRI) [*see table below*]
    - Acute cerebral syndrome with NMOSD-typical brain lesion on MRI [*see table below*]

Clinical presentation	Possible MRI findings
Diencephalic syndrome	<ul style="list-style-type: none"> <li>• Periependymal lesion</li> <li>• Hypothalamic/thalamic lesion</li> </ul>
Acute cerebral syndrome	<ul style="list-style-type: none"> <li>• Extensive periependymal lesion</li> </ul>

		<ul style="list-style-type: none"> <li>• Long, diffuse, heterogenous, or edematous corpus callosum lesion</li> <li>• Long corticospinal tract lesion</li> <li>• Large, confluent subcortical or deep white matter lesion</li> </ul>	
<p><b>Appropriate Treatment Regimen &amp; Other Criteria:</b></p>	<p><b><u>Pemphigus Vulgaris (PV) and other autoimmune blistering skin diseases (such as but not limited to pemphigus foliaceus, bullous pemphigoid, cicatricial pemphigoid, epidermolysis bullosa acquisita, and paraneoplastic pemphigus)</u></b></p> <ul style="list-style-type: none"> <li>• Diagnosis confirmed by biopsy</li> <li>• Documented severe or refractory disease with failure to conventional topical and oral systemic therapies</li> </ul> <p><b><u>Immune Thrombocytopenia (ITP), Relapsed or Refractory</u></b></p> <ul style="list-style-type: none"> <li>• Platelet count less than 20,000/microliter <b>AND</b></li> <li>• One of the following:             <ul style="list-style-type: none"> <li>○ Documented steroid dependence to maintain platelets/prevent bleeding with ITP equal or greater than 3 months</li> <li>○ Lack of clinically meaningful response to corticosteroids (defined as inability to increase platelets to at least 50,000/mcl)</li> </ul> </li> </ul> <p><b><u>All Uses</u></b></p> <ul style="list-style-type: none"> <li>• Dose-rounding to the nearest vial size within 10% of the prescribed dose will be enforced</li> <li>• Coverage of Rituxan or Rituxan Hycela requires documentation of one of the following:             <ul style="list-style-type: none"> <li>○ A documented intolerable adverse event to the preferred products, Riabni, Truxima and Ruxience, and the adverse event was not an expected adverse event attributed to the active ingredient</li> </ul> </li> </ul> <p><b><u>Oncology Uses:</u></b></p> <ul style="list-style-type: none"> <li>• Documentation of ECOG performance status of 1 or 2 OR Karnofsky performance score greater than 50%</li> </ul> <p><b><u>RA</u></b></p> <ul style="list-style-type: none"> <li>• Initial Course: Documented treatment failure (or documented intolerable adverse event) with at least 12 weeks of Infliximab (preferred biosimilar products: Inflectra, Avsola)</li> <li>• Dose is approved for up to 2 doses of 1,000 mg given every 2 weeks</li> </ul>		

- Repeat Course: Approve if 16 weeks or more after the first dose of the previous rituximab regimen and the patient has responded (e.g., less joint pain, morning stiffness, or fatigue, or improved mobility, or decreased soft tissue swelling in joints or tendon sheaths) as determined by the prescribing physician

**MPA and GPA**

- **Initial:** May include one-time induction dose (e.g., 1,000 mg once every 2 weeks for 2 doses or 375 mg/m<sup>2</sup> once weekly for 4 doses), to be used in combination with a systemic glucocorticoid
- **Maintenance:** Approvable for up to 1,000 mg annually. Higher doses will require documentation to support (e.g., positive ANCA titers, detection of CD19+ lymphocytes)

**EGPA**

- Non-severe
  - Documented treatment failure with a corticosteroid
  - Documented treatment failure with an oral immunosuppressive therapy: azathioprine, methotrexate, mycophenolate, leflunomide
- Severe
  - Documentation that rituximab will be administered in combination with a systemic glucocorticoid

**Relapsing Forms of MS**

- **Initiation:** May include one-time induction dose (e.g., 1,000 mg once every 2 weeks for 2 doses)
- **Maintenance:** Approvable up to 2,000 mg annually. Higher doses will require documentation to support

**NMOSD**

- **Initial:** May include one-time induction dose (e.g., 1,000 mg once every 2 weeks for 2 doses)
- **Maintenance:** Approvable up to 2,000 mg annually. Higher doses will require documentation to support (e.g., detection of CD19+ lymphocytes)

**PV and other autoimmune blistering skin diseases**

- Documentation that rituximab will be administered in combination with a systemic glucocorticoid (if or when appropriate)
- Documented treatment failure with 12 weeks of a corticosteroid **AND**
- Documented treatment failure with 12 weeks of an immunosuppressant at an adequate dose (e.g., azathioprine, mycophenolate, methotrexate, etc.) or other appropriate corticosteroid-sparing therapy

	<p><b><u>All other indications</u></b></p> <ul style="list-style-type: none"> <li>• A Food and Drug Administration (FDA)-approved or compendia supported dose, frequency, and duration of therapy</li> <li>• Documented treatment failure with first line recommended and conventional therapies</li> </ul> <p><b><u>Reauthorization:</u></b> documentation of disease responsiveness to therapy</p>

**Ankylosing Spondylitis, Non-radiographic Axial Spondyloarthritis**

- Diagnosis of axial spondyloarthritis (SpA) confirmed by sacroiliitis on imaging AND at least 1 spondyloarthritis feature:
  - Inflammatory back pain (4 of 5 features met):
    - Onset of back discomfort before the age of 40 years
    - Insidious onset
    - Improvement with exercise
    - No improvement with rest
    - Pain at night (with improvement upon arising)
  - Arthritis
  - Enthesitis
  - Uveitis
  - Dactylitis (inflammation of entire digit)
  - Psoriasis
  - Crohn’s disease/ulcerative colitis
  - Good response to nonsteroidal anti-inflammatory drugs (NSAIDs)
  - Family history of SpA
  - Elevated C-reactive protein (CRP)
- OR**
- HLA-B27 genetic test positive AND at least TWO SpA features
- Documentation of active disease defined by Bath ankylosing spondylitis disease activity index (BASDAI) at least 4 or equivalent objective scale

**Enthesitis-Related Arthritis or Juvenile Psoriatic Arthritis**

- Diagnosis of ERA confirmed by presence of the following:
  - Arthritis persisting at least 6 weeks AND enthesitis present
- OR**
- Arthritis or enthesitis with two of the following features:
  - Sacroiliac tenderness or inflammatory lumbosacral pain
  - Positive HLA-B27
  - Onset of arthritis in males greater than 6 years of age
  - Acute symptomatic anterior uveitis
  - First-degree relative with ERA, sacroiliitis associated with inflammatory bowel disease, reactive arthritis, or acute anterior uveitis
- OR**
- Diagnosis of JPsA confirmed by presence of:
  - Arthritis and psoriasis
- OR**
- Arthritis and at least 2 of the following:
  - Dactylitis
  - Nail pitting or onycholysis
  - Psoriasis in a first-degree relative

**POLICY NAME:**

**TRALOKINUMAB**

**Affected Medications:** ADBRY (tralokinumab)

1. Is the request for continuation of therapy currently approved through insurance?	Yes – Go to renewal criteria	No – Go to #2
2. Is the request to treat a diagnosis according to one of the Food and Drug Administration (FDA)-approved indications? • Treatment of moderate to severe atopic dermatitis in adults	Yes – Go to appropriate section below	No – Criteria not met
<b>Moderate to Severe Atopic Dermatitis</b>		
1. Is there documentation of severe inflammatory skin disease defined as functional impairment as defined by one of the following: ○ Dermatology Life Quality Index (DQLI) 11 or greater ○ Children’s Dermatology Life Quality Index (CDLQI) 13 or greater ○ Severe disease on other validated tools ○ Inability to use hands or feet for activities of daily living, or significant facial involvement preventing normal social interaction	Yes – Document and go to #2	No – Criteria not met
2. Is there a documented body surface area (BSA) effected of at least 10% OR hand, foot or mucous membrane involvement?	Yes – Document and go to #3	No – Criteria not met
3. Is there documented failure of a 4-week trial of a combination of topical moderate to high potency topical steroids and a topical non-steroidal agent?	Yes – Document and go to #5	No – Go to #4
4. Is there documented treatment failure with one of the following for at least 12 weeks: Phototherapy, cyclosporine, azathioprine, methotrexate, mycophenolate?	Yes – Document and go to #5	No – Criteria not met

5. Is the drug prescribed by, or in consultation with, a specialist in the treatment of atopic dermatitis (Such as a dermatologist)?	Yes – Approve up to 6 months	No – Criteria not met
<b>Renewal Criteria</b>		
1. Is there documentation of treatment success and a clinically significant response to therapy as assessed by the prescribing provider?	Yes – Go to #2	No – Criteria not met
2. Is the requested dose within the Food and Drug Administration (FDA)-approved label and PacificSource quantity limitations?	Yes – Approve up to 12 months	No – Criteria not met
<b>Quantity Limitations</b>		
<ul style="list-style-type: none"> <li>• <b>Adbry</b> <ul style="list-style-type: none"> <li>○ Availability: 150mg/ml prefilled syringes, 300 mg/2mL autoinjectors</li> <li>○ Dosing:           <ul style="list-style-type: none"> <li>▪ Adults 18 years and older: 600 mg as single dose, then 300 mg every 2 weeks               <ul style="list-style-type: none"> <li>• If less than 100kg and clear/almost clear is achieved, dosing may be reduced to 300mg every 4 weeks</li> </ul> </li> <li>▪ Pediatric patients 12 to 17 years old: 300 mg as a single dose, then 150 mg every 2 weeks</li> </ul> </li> </ul> </li> </ul>		

**POLICY NAME:**

**TRASTUZUMAB**

**Affected Medications:** HERCEPTIN IV (trastuzumab), HERCEPTIN HYLECTA SQ (Trastuzumab and hyaluronidase), OGIVRI (trastuzumab-dkst), KANJINTI (trastuzumab-anns), TRAZIMERA (trastuzumab-qyyp), HERZUMA (trastuzumab-pkrb), ONTRUZANT (trastuzumab-dttb)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>National Comprehensive Cancer Network (NCCN) indications with evidence level of 2A or higher</li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>Documentation of performance status, disease staging, all prior therapies used, and prescribed dosing regimen</li> <li>Documentation of HER2 positivity based on:               <ul style="list-style-type: none"> <li>3+ score on immunohistochemistry (IHC) testing</li> </ul> <b>OR</b> <ul style="list-style-type: none"> <li>Positive gene amplification by Fluorescence in situ hybridization (FISH) test</li> </ul> </li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>Maximum duration for adjuvant breast cancer therapy is 12 months</li> </ul> <p><u>All Indications</u></p> <ul style="list-style-type: none"> <li>Coverage for a non-preferred product (Herceptin or Herceptin Hylecta) requires documentation of the following:               <ul style="list-style-type: none"> <li>A documented intolerable adverse event to <b>two</b> preferred products (Kanjinti, Trazimera, Herzuma, Ontruzant and Ogivri), and the adverse event was not an expected adverse event attributed to the active ingredient</li> </ul> </li> </ul> <p><u>Reauthorization</u> will require documentation of disease responsiveness to therapy</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>Karnofsky Performance Status 50% or less or ECOG performance score 3 or greater</li> </ul>
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>Prescribed by, or in consultation with, an oncologist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>For new starts to adjuvant breast cancer therapy – approve 12 months with no reauthorization</li> <li>For all other clinical scenarios:               <ul style="list-style-type: none"> <li>Initial approval: 4 months, unless otherwise specified</li> <li>Reauthorization: 12 months, unless otherwise specified</li> </ul> </li> </ul>

**POLICY NAME:**

**VOCLOSPORIN**

**Affected Medications:** LUPKYNIS CAPSULE 7.9 MG ORAL

1. Is the request for continuation of therapy currently approved through insurance?	Yes – Go to renewal criteria	No – Go to #2
1. Is the request to treat a diagnosis according to the Food and Drug Administration (FDA)-approved indication? a. For use in combination with a background immunosuppressive therapy regimen for the treatment of adult patients with active lupus nephritis	Yes – Go to appropriate section below	No – Criteria not met
<b>Lupus Nephritis (LN)</b>		
1. Is there documented International Society of Nephrology/Renal Pathology Society (ISN/RPS) biopsy-proven active class III, IV and/or V disease?	Yes – Document and go to #2	No – Criteria not met
2. Are there documented current baseline values (within the last 3 months) for all of the following? a. Estimated glomerular filtration rate (eGFR) b. Urine protein to creatinine ratio (uPCR) c. Blood pressure	Yes – Document and go to #3	No – Criteria not met
3. Is there documented treatment failure with at least 12 weeks of standard therapy with both mycophenolate mofetil (MMF) AND cyclophosphamide?	Yes – Document and go to #4	No – Criteria not met
4. Is there documented treatment failure with at least 12 weeks of IV or subcutaneous Benlysta?	Yes – Document and go to #5	No – Criteria not met
5. Will Lupkynis be used in combination with MMF and corticosteroids or other background immunosuppressive therapy, other than cyclophosphamide?	Yes – Document and go to #6	No – Criteria not met
6. Is the drug prescribed by, or in consultation with, a rheumatologist, immunologist, nephrologist, or kidney specialist?	Yes – Go to #10	No – Criteria not met

7. Is the requested dose within the Food and Drug Administration (FDA)-approved label and PacificSource quantity limitations?	Yes – Approve up to 12 months	No – Criteria not met
<b>Renewal Criteria</b>		
<ul style="list-style-type: none"> <li>Is there documentation of treatment success defined as an increase in eGFR, decrease in uPCR, or decrease in flares and corticosteroid use?</li> </ul>	Yes – Go to #2	No – Criteria not met
<ul style="list-style-type: none"> <li>Is the requested dose within the Food and Drug Administration (FDA)-approved label and PacificSource quantity limitations?</li> </ul>	Yes – Approve up to 6 months (lifetime maximum 12 months of therapy)	No – Criteria not met
<b>Quantity Limitations</b>		
<ul style="list-style-type: none"> <li><b>Lupkynis</b> <ul style="list-style-type: none"> <li>Starting dose: 23.7 mg twice daily (BID)</li> <li>Starting dose must be reduced in the below situations as follows:           <ul style="list-style-type: none"> <li>eGFR 45 mL/min/1.73 m<sup>2</sup> or less at initiation: 15.8mg BID</li> <li>Mild-to-moderate hepatic impairment (Child-Pugh A or B): 15.8mg BID</li> <li>Concomitant use with moderate CYP3A4 inhibitors: 15.8mg in morning and 7.9mg in afternoon.</li> </ul> </li> </ul> </li> </ul>		

**POLICY NAME:**

**VORETIGENE NEPARVOVEC**

**Affected Medications:** LUXTURNA (voretigene neparvovec-rzyl intraocular suspension for subretinal injection)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA) approved indications not otherwise excluded by plan design. <ul style="list-style-type: none"> <li>○ Inherited Retinal Dystrophies (IRD) caused by mutations in the retinal pigment epithelium-specific protein 65kDa (RPE65) gene.</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Diagnosis of a confirmed biallelic RPE65 mutation-associated retinal dystrophy (e.g. Leber’s congenital amaurosis [LCA], Retinitis pigmentosa [RP], Early Onset Severe Retinal Dystrophy [EOSRD], etc.); <b>AND</b></li> <li>• Genetic testing documenting biallelic mutations of the RPE65 gene; <b>AND</b></li> <li>• Visual acuity of at least 20/800 OR have remaining light perception in the eye(s) receiving treatment <b>AND</b></li> <li>• Visual acuity of less than 20/60 OR a visual field of less than 20 degrees <b>AND</b></li> <li>• Presence of neural retina and a retinal thickness greater than 100 microns within the posterior pole as assessed by optical coherence tomography with <b>AND</b> have sufficient viable retinal cells as assessed by the treating physician</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Patient has been previously enrolled in clinical trials of gene therapy for retinal dystrophy RPE65 mutations or has previously been treated with gene therapy for retinal dystrophy in the eye(s) receiving treatment</li> <li>• Patient has other pre-existing eye conditions or complicating systemic diseases that would eventually lead to irreversible vision loss and prevent the patient from receiving full benefit from treatment (e.g. severe diabetic retinopathy)</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• 12 months of age and older</li> </ul>
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Ophthalmologist or retinal surgeon with experience providing sub-retinal injections</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Approval: 1 month - 1 injection per eye, per lifetime</li> </ul>

**POLICY NAME:**

**VORICONAZOLE**

**Affected Medications:** Voriconazole tablet, Voriconazole Intravenous (IV)

<p><b>Covered Uses:</b></p>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded from benefit design             <ul style="list-style-type: none"> <li>○ Invasive aspergillosis</li> <li>○ Candidemia in non-neutropenic patients with the following Candida infections: disseminated skin infections and infections in the abdomen, kidney, bladder wall and wounds</li> <li>○ Esophageal candidiasis</li> <li>○ Invasive candidiasis</li> <li>○ Serious mycosis infections due to <i>Scedosporium apiospermum</i> and <i>Fusarium</i> species</li> </ul> </li> <li>• Compendia-supported uses that will be covered (if applicable)             <ul style="list-style-type: none"> <li>○ Empiric therapy in high-risk patients with febrile neutropenia despite receiving broad-spectrum antibiotic therapy</li> <li>○ Continuation of therapy for patients started/stabilized on IV or oral voriconazole for a systemic infection</li> <li>○ Blastomycosis</li> <li>○ Candida endophthalmitis</li> <li>○ Infection caused by <i>Talaromyces marneffe</i> in patients with HIV</li> <li>○ Chronic pulmonary aspergillosis – cavitary or necrotizing</li> </ul> </li> </ul>
<p><b>Required Medical Information:</b></p>	<ul style="list-style-type: none"> <li>• <b>All indications:</b> <ul style="list-style-type: none"> <li>○ Susceptibility cultures matching voriconazole activity</li> <li>○ Exceptions made for empiric therapy as long as treatment is adjusted when susceptibility cultures are available</li> <li>○ Documentation of an Oregon Health Authority (OHA) funded condition</li> </ul> </li> <li>• <b>Esophageal candidiasis</b> <ul style="list-style-type: none"> <li>○ Documented treatment failure with one other systemic agent (such as fluconazole, IV amphotericin B, itraconazole)</li> </ul> </li> </ul>

**Affected Medications:** XURIDEN (uridine triacetate)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design               <ul style="list-style-type: none"> <li>○ Hereditary orotic aciduria</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Diagnosis of hereditary orotic aciduria confirmed by <b>ONE</b> of the following:               <ul style="list-style-type: none"> <li>○ Molecular genetic testing confirming biallelic pathogenic mutation in the UMPS gene</li> <li>○ Urinary orotic acid level above the normal reference range</li> <li>○ Clinical manifestations consistent with disease such as:                   <ul style="list-style-type: none"> <li>▪ Megaloblastic anemia</li> <li>▪ Leukopenia</li> <li>▪ Developmental delays</li> <li>▪ Failure to thrive</li> </ul> </li> </ul> </li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<p><u>Reauthorization</u> requires documentation of treatment success based on <b>ONE</b> of the following:</p> <ul style="list-style-type: none"> <li>• Improvement of hematologic abnormalities such as megaloblastic anemia and leukopenia</li> <li>• Reduction of urinary orotic acid levels</li> </ul>
<b>Exclusion Criteria:</b>	
<b>Age Restriction:</b>	
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, a metabolic specialist or geneticist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Approval: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**

YONSA

**Affected Medications:** YONSA (abiraterone)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA) approved indications not otherwise excluded by plan design.</li> <li>• National Comprehensive Cancer Network (NCCN) indications with evidence level of 2A or higher</li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Documentation of performance status, disease staging, all prior therapies used, and anticipated treatment course</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• A documented inadequate response or intolerable adverse event with the preferred product abiraterone acetate</li> </ul> <p><b>Reauthorization</b> will require documentation of disease responsiveness to therapy</p>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Child-Pugh Class C</li> <li>• Karnofsky Performance Status 50% or less or ECOG performance score 3 or greater</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• 18 years of age and older</li> </ul>
<b>Prescriber Restrictions:</b>	<ul style="list-style-type: none"> <li>• Prescribed by, or in consultation with, an oncologist</li> </ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"> <li>• Initial approval: 4 months, unless otherwise specified</li> <li>• Subsequent approval: 12 months, unless otherwise specified</li> </ul>

**POLICY NAME:**

**ZILUCOPLAN**

Affected Medications: ZILBRYSQ (zilucoplan)

<b>Covered Uses:</b>	<ul style="list-style-type: none"> <li>• All Food and Drug Administration (FDA)-approved indications not otherwise excluded by plan design <ul style="list-style-type: none"> <li>○ Generalized myasthenia gravis (gMG) in adult patients who are anti-acetylcholine receptor (AChR) antibody positive</li> </ul> </li> </ul>
<b>Required Medical Information:</b>	<ul style="list-style-type: none"> <li>• Diagnosis of generalized Myasthenia Gravis (gMG) confirmed by one of the following: <ul style="list-style-type: none"> <li>○ A history of abnormal neuromuscular transmission test</li> <li>○ A positive edrophonium chloride test</li> <li>○ Improvement in gMG signs or symptoms with an acetylcholinesterase inhibitor</li> </ul> </li> <li>• Myasthenia Gravis Foundation of America (MGFA) Clinical Classification Class II to IV</li> <li>• Positive serologic test for AChR antibodies</li> <li>• MG-Activities of Daily Living (MG-ADL) total score of 6 or greater <b>OR</b></li> <li>• Quantitative Myasthenia Gravis (QMG) total score of 12 or greater</li> </ul>
<b>Appropriate Treatment Regimen &amp; Other Criteria:</b>	<ul style="list-style-type: none"> <li>• Currently on a stable dose of at least one gMG therapy (acetylcholinesterase inhibitor, corticosteroid, or non-steroidal immunosuppressive therapy (NSIST)) that will be continued during initial treatment with Zilbrysq.</li> <li>• Documentation of one of the following: <ul style="list-style-type: none"> <li>○ Treatment failure with an adequate trial (one year or more) of at least two immunosuppressive therapies (azathioprine, mycophenolate, tacrolimus, cyclosporine, methotrexate)</li> <li>○ Has required three or more courses of rescue therapy (plasmapheresis/plasma exchange and/or intravenous immunoglobulin), while on at least one immunosuppressive therapy, over the last 12 months</li> </ul> </li> </ul> <p><b>Reauthorization</b> requires:</p> <ul style="list-style-type: none"> <li>• Documentation of treatment success and clinically significant response to therapy defined as: <ul style="list-style-type: none"> <li>○ A minimum 2-point reduction in MG-ADL score from baseline AND</li> <li>○ Absent or reduced need for rescue therapy compared to baseline</li> </ul> </li> <li>• That the patient requires continuous treatment, after an initial beneficial response, due to new or worsening disease activity</li> </ul>
<b>Exclusion Criteria:</b>	<ul style="list-style-type: none"> <li>• Current or recent systemic infection within 2 weeks</li> <li>• Concurrent use with other biologics (rituximab, eculizumab, IVIG, etc)</li> </ul>
<b>Age Restriction:</b>	<ul style="list-style-type: none"> <li>• 18 years of age and older</li> </ul>

<b>Prescriber/Site of Care Restrictions:</b>	<ul style="list-style-type: none"><li>• Prescribed by, or in consultation with, a neurologist</li></ul>
<b>Coverage Duration:</b>	<ul style="list-style-type: none"><li>• Initial Authorization: 4 months, unless otherwise specified</li><li>• Reauthorization: 12 months, unless otherwise specified</li></ul>
